1. General information

Read this document before you install the product. Installation and operation must comply with local regulations and accepted codes of good practice.

These installation and operating instructions are a supplement to the installation and operating instructions for the corresponding standard pumps NB, NBS, NK, TP, TPD. For instructions not mentioned specifically in this manual, see the installation and operating instructions for the standard pump.

The NBE, NBSE, NKE, TPE, TPED pumps are fitted with frequency-controlled permanent-magnet motors for single-phase or three-phase mains connection.

The product must only be connected to protected network subnets with strict access control.

1.1 Symbols used in this document

1.1.1 Warnings against hazards involving risk of death or personal injury

DANGER
Indicates a hazardous situation which, if not avoided, will result in death or serious personal injury.

WARNING
Indicates a hazardous situation which, if not avoided, could result in death or serious personal injury.

CAUTION
Indicates a hazardous situation which, if not avoided, could result in minor or moderate personal injury.

The text accompanying the three hazard symbols DANGER, WARNING and CAUTION is structured in the following way:

1.2 Other important notes

SIGNAL WORD

Description of the hazard

Consequence of ignoring the warning

- Action to avoid the hazard.

A blue or grey circle with a white graphical symbol indicates that an action must be taken.

A red or grey circle with a diagonal bar, possibly with a black graphical symbol, indicates that an action must not be taken or must be stopped.

1.3 Abbreviations and definitions

AI	Analog input.
AL	Alarm, out of range at lower limit.
AO	Analog output.
AU	Alarm, out of range at upper limit.
CIM	Communication interface module.
Current sinking	The ability to draw current into the terminal and guide it towards ground (earth) in the internal circuitry.
Current sourcing	The ability to push current out of the terminal and into an external load which must return it to ground (earth).
DI	Digital input.
DO	Digital output.
ELCB	Earth leakage circuit breaker.
FM	Functional module.
GDS	Grundfos Digital Sensor. Factory-fitted sensor in some Grundfos pumps.
GENibus	Proprietary Grundfos fieldbus standard.
GFCI	Ground fault circuit interrupter. USA and Canada.
GND	Ground (Earth).
Grundfos Eye	Status indicator light.
LIVE	Low voltage with the risk of electric shock if the terminals are touched.
OC	Open collector: Configurable open-collector output.
PE	Protective earth.
	Protective extra-low voltage.
PELV	A voltage that cannot exceed ELV under normal conditions and under single-fault conditions, except ground (earth) faults in other circuits.
RCD	Residual-current device
	Safety extra-low voltage.
SELV	A voltage that cannot exceed ELV under normal conditions and under single-fault conditions, including ground (earth) faults in other circuits.
NBE, NBSE, NKE, TPE	Single-head pump without factory-fitted differential-pressure sensor.
TPED	Twin-head pump without factory-fitted differential-pressure sensor.
NBE, NBSE, NKE, TPE, TPED Series 2000	Single-head pump (NBE, NBSE, NKE, TPE) and twin-head pump (TPED) with factory-fitted differential-pressure sensor.

1.4 Radio communication

This product incorporates a radio module for remote control which is a class 1 device and can be used anywhere in the EU member states without restrictions.

For use in USA and Canada, see Appendix.

This product can communicate with Grundfos GO and other products of the same type via the built-in radio module.

In some cases, an external antenna may be required. Only Grundfos-approved external antennas may be connected to this product, and only by a Grundfos-approved installer.

1.5 Battery

Pumps fitted with the advanced functional module, FM 300, incorporate a Li-ion battery. The Li-ion battery complies with the Battery Directive (2006/66/EC). The battery does not contain mercury, lead and cadmium.

WARNING

Intoxication or risk of chemical burn

Death or serious personal injury

- The battery can cause severe or fatal injuries in 2 hours or less if it is swallowed or placed inside any part of the body. In such an event, seek medical attention immediately.
- The replacement or servicing of batteries must be carried out by a qualified person.
- The battery contained within this product, whether new or used, is hazardous and is to be kept away from children.

2. Receiving the product

2.1 Transporting the product

WARNING

Falling objects

Death or serious personal injury

- Secure the product during transportation to prevent it from tilting or falling down.

CAUTION

Crushing of feet

Minor or moderate personal injury

- Wear safety shoes when moving the product.

2.2 Inspecting the product

Before you install the product, do the following:

1. Check that the product is as ordered.
2. Check that no visible parts have been damaged.

If parts are damaged or missing, contact your local Grundfos sales company.

3. Mechanical installation

Installation related work on the product must only be performed by qualified persons.

WARNING

Rotating parts

Death or serious personal injury

- Stay clear of the product after switching on power, as the shaft can rotate immediately.
- Make sure to install a protective cover before powering on the product.

WARNING

Flying object

Death or serious personal injury

- If no pump or coupling is attached to the motor, always remove the parallel key from the motor shaft before starting the motor.

WARNING

Crushing of feet

Death or serious personal injury

- Secure the product to a solid foundation by bolts through the holes in the flange or the foot.

WARNING

Tilting object

Death or serious personal injury

- Keep your distance when lifting the motor, as the motor may tilt slightly to the sides.

CAUTION

Sharp element

Minor or moderate personal injury

- When opening the packaging or mounting the product on a pump, wear protective gloves to avoid cutting your hands on sharp edges.

The product must be installed in a place with access control to prevent unauthorized access to the product.

To maintain the cURus mark, additional requirements apply to the equipment.

3.1 Handling the product

Observe local regulations setting limits for manual lifting or handling. The motor weight is stated on the nameplate.

CAUTION

Back injury

Minor or moderate personal injury

- Use lifting equipment.

CAUTION

Crushing of feet

Minor or moderate personal injury

- Wear safety shoes and attach lifting equipment to the motor eyebolts when handling the product.

Do not lift the product by the terminal box.

3.2 Mounting the product

CAUTION

Crushing of feet

Minor or moderate personal injury

- Secure the product to a solid foundation by bolts through the holes in the flange or the base plate.

- In order to maintain the UL mark, additional requirements apply to the equipment. See Appendix.

Secure the pump to a solid foundation by bolts through the holes in the flange or the base plate.

3.3 Cable entries

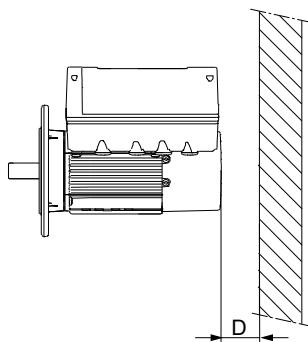

See the size of the cable entries in the section Other technical data.

Related information

[26. Other technical data](#)

3.4 Ensuring motor cooling

Leave at least 2 inches (50 mm) between the end of the fan cover and a wall or other fixed objects. See the figure below.

Minimum distance, D, from the motor to a wall or other fixed objects

TM055236

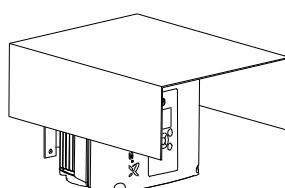

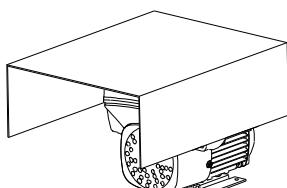

3.5 Outdoor installation

If you install the motor outdoors, provide the motor with a cover and open the drain holes to avoid condensation on the electronic components. See figures Examples of covers, not supplied by Grundfos and Drain holes.

- When fitting a cover to the motor, observe the guidelines in section Ensuring motor cooling.

The cover must be sufficiently large to ensure that the motor is not exposed to direct sunlight, rain or snow. Grundfos does not supply covers. We therefore recommend that you have a cover built for the specific application. In areas with high humidity, we recommend that you connect the motor permanently to the mains supply and activate the built-in standstill heating function. See section "Standstill heating".

TM053406

Examples of covers, not supplied by Grundfos

In order to maintain the UL mark, additional requirements apply to the equipment. See Appendix.

Related information

[3.4 Ensuring motor cooling](#)

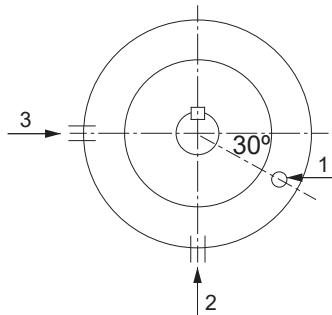

[3.6 Drain holes](#)

[10.20 "Standstill heating"](#)

3.6 Drain holes

When the motor is installed in moist surroundings or areas with high humidity, the bottom drain hole must be open. The enclosure class of the motor will then be lower. This helps prevent condensation in the motor as the motor becomes self-venting, and it allows water and humid air to escape.

The motor has a plugged drain hole on the drive side. You can turn the flange 90 ° to both sides or 180 °.

TM078300

Drain holes

Pos.	Description
1	Drain hole for vertically mounted motor
2, 3	Drain hole for horizontally mounted motor

Ensure that the drain hole in the motor flange is open and is facing downwards.

4. Electrical installation

DANGER

Electric shock

Death or serious personal injury

- Switch off the power supply to the motor and to the signal relays. Wait at least 5 minutes before you make any connections in the terminal box. Make sure that the power supply cannot be accidentally switched on.

DANGER

Electric shock

Death or serious personal injury

- Check that the supply voltage and frequency correspond to the values stated on the nameplate.

If the power supply cable is damaged, it must be replaced by the manufacturer, the manufacturer's service partner or a similarly qualified person.

The user or the installer is responsible for the installation of correct grounding (earthing) and protection according to local regulations. All operations must be carried out by a qualified electrician.

Carry out the electrical connection according to local regulations.

Check that the supply voltage and frequency correspond to the values stated on the nameplate.

4.1 Protection against electric shock, indirect contact

WARNING

Electric shock

Death or serious personal injury

- Connect the motor to protective earth and provide protection against indirect contact in accordance with local regulations.

Protective-earth conductors must always have a yellow and green, PE, or yellow, green and blue, PEN, colour marking.

4.1.1 Protection against mains voltage transients

The motor is protected against mains voltage transients in accordance with EN 61800-3.

4.1.2 Motor protection

The motor requires no external motor protection. The motor incorporates thermal protection against slow overloading and blocking.

Model H, I: The product includes load- and speed- sensitive motor-overload protection.

4.2 Cable requirements

4.2.1 Cable cross-section

DANGER

Electric shock

Death or serious personal injury

- Always comply with local regulations as to cable cross-sections.

1 x 200-230 V

Power		Conductor type	Cross section	
[hp]	[kW]		[AWG]	[mm ²]
0.33 - 2.0	0.25 - 1.5	Solid	16-12	1.5 - 2.5
		Stranded	16-12	1.5 - 2.5

3 x 200-240 V

Power		Conductor type	Cross section	
[hp]	[kW]		[AWG]	[mm ²]
1.5 - 2.0	1.1 - 1.5	Solid	16-8	1.5 - 10
		Stranded	16-8	1.5 - 10
3.5 - 7.5	2.5 - 5.5	Solid	14-8	2.5 - 10
		Stranded	14-8	2.5 - 10

3 x 380-500 V

Power		Conductor type	Cross section	
[hp]	[kW]		[AWG]	[mm ²]
0.33 - 3.0	0.25 - 2.2	Solid	16-8	1.5 - 10
		Stranded	16-8	1.5 - 10
4.0 - 14.75	3.0 - 11	Solid	14-8	2.5 - 10
		Stranded	14-8	2.5 - 10

4.2.2 Conductors

Type

Stranded or solid copper conductors.

Temperature rating

Temperature rating for conductor insulation: 140 °F (60 °C).

Temperature rating for outer cable sheath: 167 °F (75 °C).

4.3 Mains supply

DANGER

Electric shock

Death or serious personal injury

- Use the recommended fuse size. See section Supply voltage.

Related information

[23.1 Supply voltage](#)

[24.1 Supply voltage](#)

4.3.1 Single-phase supply voltage

- 1 x 200-230 V - 10 %/+ 10 %, 50/60 Hz, PE.

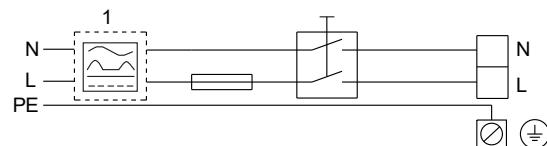

Check that the supply voltage and frequency correspond to the values stated on the nameplate.

If you want to supply the motor through an IT network, make sure that you have a suitable motor variant. If you are in doubt, contact Grundfos.

The wires in the motor terminal box must be as short as possible. Excepted from this is the separated ground (earth) conductor which must be so long that it is the last one to be disconnected in case the cable is inadvertently pulled out of the cable entry.

For maximum backup fuse, see section Supply voltage.

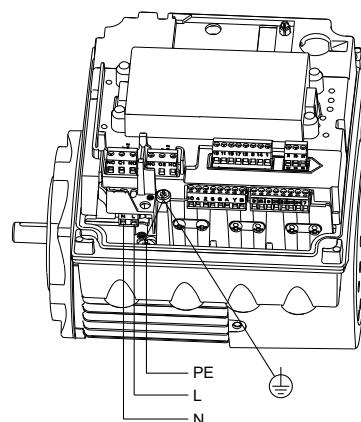

TM054034

Example of a mains-connected motor with mains switch, backup fuse and additional protection

Pos. Description

1 GFCI, type B

TM055494

Mains connection, single-phase motors

Related information

[23.1 Supply voltage](#)

4.3.2 Three-phase supply voltage

Three-phase motors are available for the voltages below:

- 3 x 380-500 V - 10 %/+ 10 %, 50/60 Hz, PE
- 3 x 200-240 V - 10 %/+ 10 %, 50/60 Hz, PE.

Check that the supply voltage and frequency correspond to the values stated on the nameplate.

The wires in the motor terminal box must be as short as possible. Excepted from this is the separated ground (earth) conductor which must be so long that it is the last one to be disconnected in case the cable is inadvertently pulled out of the cable entry.

In order to avoid loose connections, ensure that the terminal block for L1, L2 and L3 is pressed home in its socket when the supply cable has been connected.

For maximum backup fuse, see section Supply voltage.

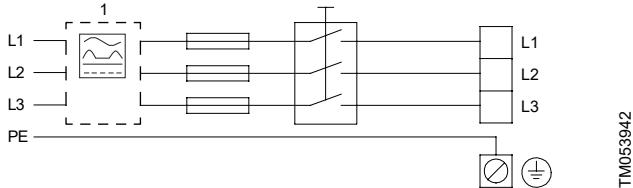

If you want to supply the motor through an IT network, make sure that you have a suitable motor variant. If you are in doubt, contact Grundfos.

Only the following motors can be supplied through an IT network:

- Motors with speed of 1450-2000/2200 rpm and up to 2.0 HP (1.5 kW)
- Motors with speed of 2900-4000 rpm or 4000-5900 rpm and up to 3 HP (2.2 kW).

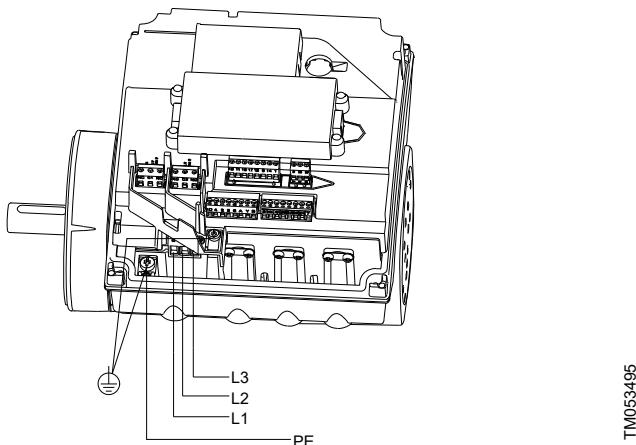

Corner grounding is not allowed for supply voltages above 3 x 480 V, 50/60 Hz.

Example of a mains-connected motor with mains switch, backup fuses and additional protection

Pos.	Description
1	GFCI, type B

Mains connection, three-phase motors

Related information

[24.1 Supply voltage](#)

4.4 Additional protection

DANGER

Electric shock

Death or serious personal injury

- Only use residual-current circuit breakers (ELCB, GFCI, RCD) of type B.

The residual-current circuit breaker must be marked with the following symbol:

The total leakage current of all the electrical equipment in the installation must be taken into account. You find the leakage current of the motor in the sections on leakage current and leakage current (AC).

This product can cause a direct current in the protective earth conductor.

Overtightening and undervoltage protection

Overtightening and undervoltage may occur in case of unstable power supply or faulty installation. The motor stops if the voltage falls outside the permissible voltage range. The motor restarts automatically when the voltage is again within the permissible voltage range. Therefore, no additional protection relay is required.

The motor is protected against transients from the power supply according to EN 61800-3. In areas with high lightning intensity, we recommend external lightning protection.

Overload protection

If the upper load limit is exceeded, the motor automatically compensates for it by reducing the speed and stops if the overload condition persists.

The motor remains stopped for a set period. After this period, the motor automatically attempts to restart. The overload protection prevents damage to the motor. Consequently, no additional motor protection is required.

Overtightening protection

The electronic unit has a built-in temperature sensor as an additional protection. When the temperature rises above a certain level, the motor automatically compensates for it by reducing the speed and stops if the temperature keeps rising. The motor remains stopped for a set period. After this period, the motor automatically attempts to restart.

Protection against phase unbalance

Three-phase motors must be connected to a power supply with a quality corresponding to IEC 60146-1-1, class C, to ensure correct motor operation at phase unbalance. This also ensures long life of the components.

Related information

[23.2 Leakage current](#)

[24.2 Leakage current, AC](#)

4.5 Connection terminals

The descriptions and terminal overviews in this section apply to both single-phase and three-phase motors.

For maximum torques, see section Torques.

Related information

26.1 Torques

4.5.1 Connection terminals, advanced functional module, FM 300

The advanced module has these connections:

- three analog inputs
The factory-fitted analogue differential-pressure DPI sensor for TPE Series 2000 is connected to one of these inputs.
- one analog output
- two dedicated digital inputs
- two configurable digital inputs or open-collector outputs
- input and output for Grundfos Digital Sensor
Not applicable for NBE, NBSE, NKE, TPE, TPED pumps. The factory-fitted digital differential-pressure DPS sensor for NBE, NBSE, NKE, TPE, TPED Series 2000 is connected to this input.
- two Pt100/1000 inputs
- two LiqTec sensor inputs
- two signal relay outputs
- GENIbus connection.

See the figure Connection terminals, FM 300.

Digital input 1 is factory-set to be start-stop input where open circuit results in stop. A jumper has been factory-fitted between terminals 2 and 6. Remove the jumper if digital input 1 is to be used as external start-stop or any other external function.

DANGER

Electric shock

Death or serious personal injury

- Make sure that the wires to be connected to the connection groups below are separated from each other by reinforced insulation in their entire lengths.

Inputs and outputs

All inputs and outputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits.

All control terminals are supplied by protective extra-low voltage, PELV, thus ensuring protection against electric shock.

Signal relay outputs

- Signal relay 1:

LIVE:

You can connect supply voltages up to 250 VAC.

PELV:

The output is galvanically separated from other circuits.

Therefore, you can connect the supply voltage or protective extra-low voltage to the output as desired.

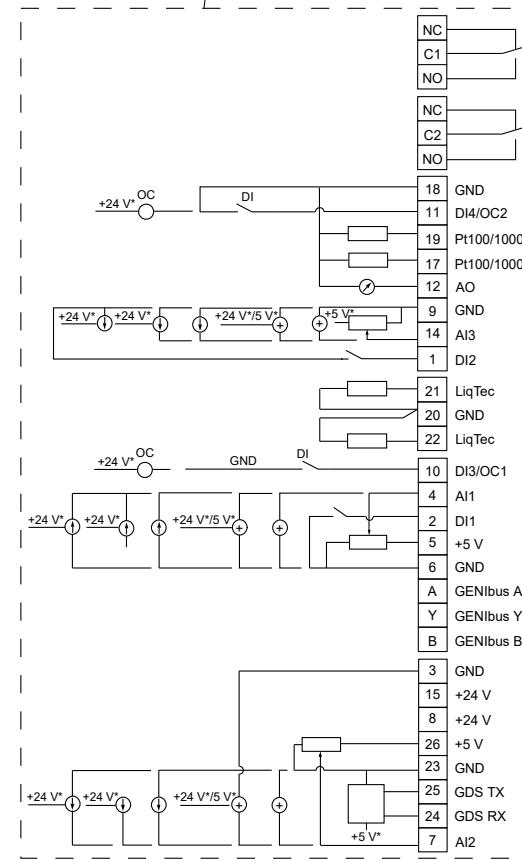

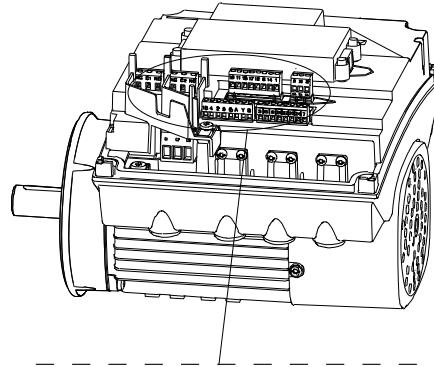

- Signal relay 2:

PELV:

The output is galvanically separated from other circuits.

Therefore, you can connect the supply voltage or protective extra-low voltage to the output as desired.

- Mains supply, terminals N, PE, L or L1, L2, L3, PE.

TM053509

* If you use an external supply source, make sure that there is a connection to GND.

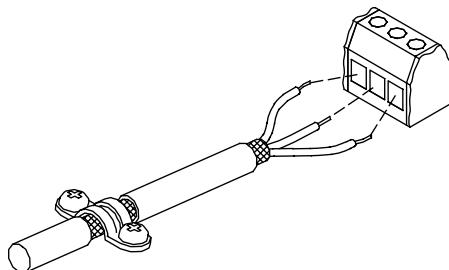

Connection terminals, FM 300

Terminal	Type	Function
NC	Normally closed contact	
C1	Common	Signal relay 1 LIVE or PELV

		Analog input: 0-20 mA / 4-20 mA 0.5 - 3.5 V / 0-5 V / 0-10 V
7	AI2	

4.6 Signal cables

- Use screened cables with a cross-sectional area of minimum 0.5 mm² and maximum 1.5 mm² for external on/off switch, digital inputs, setpoint and sensor signals.
- Connect the screens of the cables to frame at both ends with good connection. The screens must be as close as possible to the terminals. See the figure below.

Stripped cable with screen and wire connections

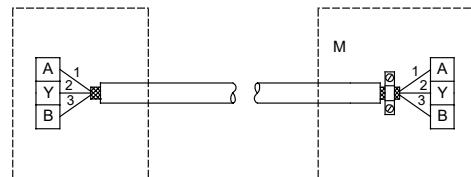

4.7 Bus connection cable

4.7.1 New installations

For the bus connection, use a screened 3-core cable with a cross-sectional area of minimum 0.5 mm² and maximum 1.5 mm².

If the motor is connected to a unit with a cable clamp which is identical to the one on the motor, connect the screen to this cable clamp.

If the unit has no cable clamp, leave the screen unconnected at this end.

TM078986

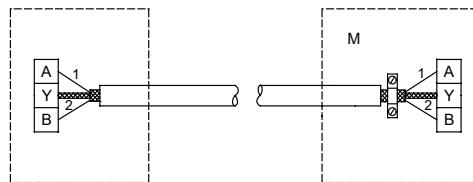

Connection with screened 3-core cable

Pos.	Description
------	-------------

M Motor

4.7.2 Replacing a motor

- If you have used a screened 2-core cable in the existing installation, connect the cable as shown below.

TM078987

Connection with screened 2-core cable

Pos.	Description
------	-------------

M Motor

- If you have used a screened 3-core cable in the existing installation, follow the instructions in section New installation.

5. Operating conditions

5.1 Maximum number of starts and stops

The number of starts and stops via the power supply must not exceed four times per hour.

When switched on via the power supply, the pump starts after approximately 5 seconds.

If a higher number of starts and stops is desired, use the input for external start-stop when starting or stopping the pump.

When started via an external on/off switch, the pump starts immediately.

5.2 Alternating operation of twin-head pumps

On twin-head pumps, the duty and backup pumps must be alternated on a regular basis, i.e. once a week, to ensure an even distribution of the operating hours on both pumps. The pumps alternate automatically. See section "Multipump setup" (Setup of multi-pump system).

If twin-head pumps are used for pumping domestic hot water, the duty and backup pumps must be alternated on a regular basis, i.e. once a day, to avoid blocking of the backup pump due to deposits such as calcareous deposits. As default, the pumps alternate automatically. See section "Multipump setup" (Setup of multi-pump system).

Related information

[10.43 "Multipump setup" \(Setup of multi-pump system\)](#)

5.3 Ambient temperature

5.3.1 Ambient temperature during storage and transportation

Minimum: -22 °F (-30 °C)

Maximum: 140 °F (60 °C).

5.3.2 Ambient temperature during operation

	1 x 200-230 V	3 x 200-240 V	3 x 380-500 V
Minimum	-4 °F (-20 °C)	-4 °F (-20 °C)	-4 °F (-20 °C)
Maximum	122 °F (50 °C)	104 °F (40 °C)	122 °F (50 °C)

The motor can operate with the rated power output, P2, at 122 °F (50 °C), but continuous operation at higher temperatures reduces the expected product life. If the motor is to operate at ambient temperatures between 122 and 140 °F (50 and 60 °C) (for 3 x 380-500 V), or 104 and 122 °F (40 and 50 °C) (for 1 x 200-230 V or 3 x 200-240 V), select an oversized motor. Contact Grundfos for further information.

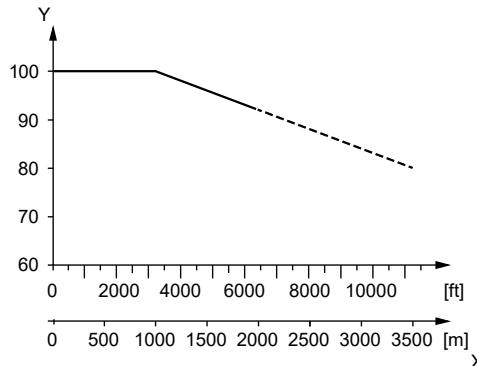

5.4 Installation altitude

Installation altitude is the height above sea level of the installation site. The motors can be installed up to 11,482 feet (3500 m) above sea level.

Motors installed up to 3280 feet (1000 m) above sea level can be loaded 100 %.

Motors installed more than 3280 feet (1000 m) above sea level must not be fully loaded due to the low density and consequent low cooling effect of the air.

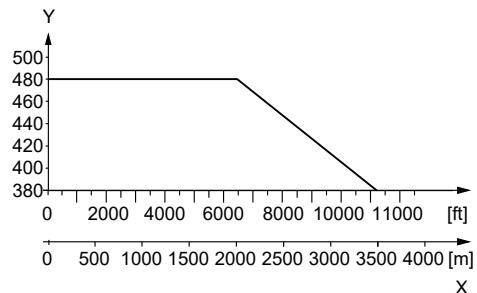

TM081254

Motor output power in relation to altitude

Pos.	Description
X	Altitude
Y	P2 [%]

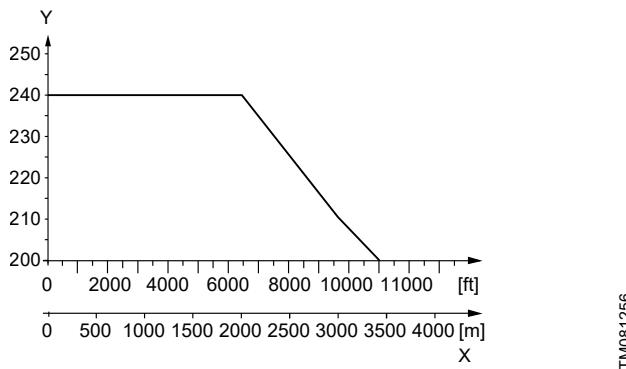

In order to maintain the galvanic isolation and ensure correct clearance according to EN 60664-1:2007, you must adapt the supply voltage to the altitude:

TM081255

Supply voltage for three-phase motor in relation to altitude

Pos.	Description
X	Supply voltage [V]
Y	Altitude

Supply voltage for single-phase motor in relation to altitude

Pos.	Description
X	Supply voltage [V]
Y	Altitude

5.5 Humidity

Maximum humidity: 95 %.

If the humidity is constantly high and above 85 %, one of the drain holes in the drive-end flange must be open. See section Drain holes.

Related information

[3.6 Drain holes](#)

5.6 Motor cooling

To ensure cooling of motor and electronics, observe the following:

- Position the motor in such a way that adequate cooling is ensured. See section Ensuring motor cooling.
- The temperature of the cooling air must not exceed 122 °F (50 °C) (for 3 x 380-500 V), or 104 °F (40 °C) (for 1 x 200-230 V or 3 x 200-240 V).
- Keep cooling fins and fan blades clean.

Related information

NBE, NBSE, NKE, TPE, TPED Series 2000	-	-

Standard control panel

Pos.	Symbol	Description
1		Grundfos Eye Shows the operating status of the pump. See section Grundfos Eye for further information.
2	-	Light fields for indication of setpoint.
3		Up and down. Changes the setpoint.
4		Allows radio communication with Grundfos GO and other products of the same type. When you try to establish radio communication between the pump and Grundfos GO or another pump, the green indicator light in Grundfos Eye on the pump flashes continuously. Press on the pump control panel to allow radio communication with Grundfos GO and other products of the same type.
5		Makes the pump ready for operation as well as starts and stops the pump. Start If you press the button when the pump is stopped, the pump only starts if no other functions with higher priority have been enabled. See section Priority of settings. Stop If you press the button when the pump is running, the pump always stops. The "Stop" text next to the button is on.

Related information

- 13. [Priority of settings](#)
- 14. [Grundfos Eye](#)

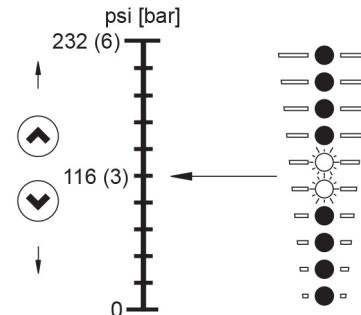

7.1 Setpoint setting

Set the desired setpoint of the pump by pressing **Up** or **Down**. The light fields on the control panel indicates the setpoint set.

7.1.1 Pump in differential-pressure control mode

The following example applies to a pump in an application where a pressure sensor gives a feedback to the pump. If you retrofit the sensor to the pump, set it manually as the pump does not automatically register a connected sensor.

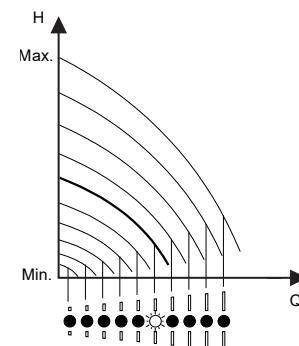

The figure below shows that the light fields 5 and 6 are activated, indicating a desired setpoint of 3 m with a sensor measuring range from 0 to 6 m. The setting range is equal to the sensor measuring range.

Setpoint set to 3 m, differential-pressure control

7.1.2 Pump in constant-curve control mode

In constant-curve control mode, the pump performance lies between the maximum and minimum curve of the pump. See the figure below.

Pump in constant-curve control mode

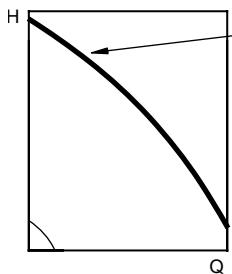

Setting to maximum curve:

- Press continuously to change over to the maximum curve of the pump. The top light field flashes. When the top light field is on, press for 3 seconds until the light field starts flashing.
- To change back, press continuously until the desired setpoint is indicated.

Example

Pump set to maximum curve.

The figure below shows that the top light field is flashing, indicating maximum curve.

TM054996

Maximum-curve duty

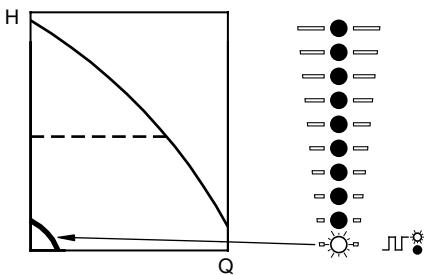

Setting to minimum curve:

- Press continuously to change over to the minimum curve of the pump. The bottom light field flashes. When the bottom light field is on, press for 3 seconds until the light field starts flashing.
- To change back, press continuously until the desired setpoint is indicated.

Example

Pump set to minimum curve.

The figure below shows that the bottom light field is flashing, indicating minimum curve.

TM054997

Minimum-curve duty**7.1.3 Start-stop of pump**

If you have stopped the pump by pressing and the "Stop" text on the control panel is on, you can only give it free to operation by pressing again.

If you have stopped the pump by pressing , you can restart it by pressing or by using Grundfos GO.

Start the pump by pressing or by continuously pressing until the desired setpoint is indicated.

Stop the pump by pressing . When the pump is stopped, the "Stop" text next to the button is on. You can also stop the pump by continuously pressing until none of the light fields are on.

You can also stop the pump with the Grundfos GO or via a digital input set to **External stop**. See section Priority of settings.

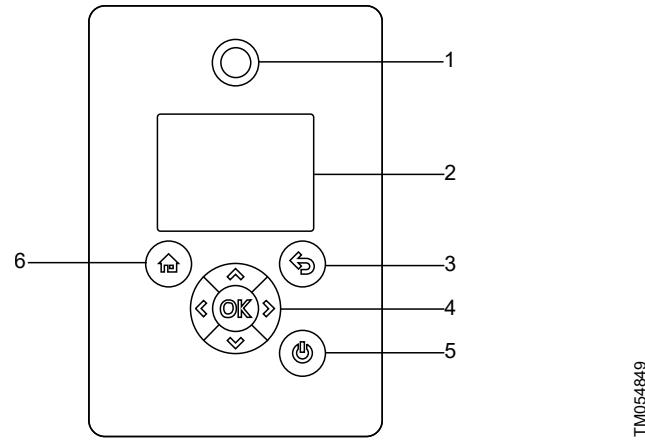

Related information**13. Priority of settings****7.1.4 Resetting of fault indications**

Reset a fault indication in one of the following ways:

- Via the digital input if it has been set to Alarm resetting.
- Briefly press or on the pump. This does not change the setting of the pump. You cannot reset a fault indication by pressing or if the buttons have been locked.
- Switch off the power supply until the indicator lights are off.
- Switch the external start-stop input off and on.
- With Grundfos GO.

9. Grundfos GO

The pump is designed for wireless radio or infrared communication with Grundfos GO.

Grundfos GO enables setting of functions and gives access to status overviews, technical product information and actual operating parameters.

Grundfos GO offers the following mobile interfaces (MI).

Grundfos GO communicating with the pump via radio or infrared connection, IR

Pos.	Description
	Grundfos MI 301:
1	Separate module enabling radio or infrared communication. You can use the module in conjunction with an Android or iOS-based smart device with Bluetooth connection.

9.1 Communication

When Grundfos GO initiates communication with the pump, the indicator light in the middle of Grundfos Eye flashes green. See section *Grundfos Eye*.

Furthermore, on pumps fitted with an advanced control panel a text appears in the display saying that a wireless device is trying to establish connection. Press **OK** on the pump in order to establish connection with Grundfos GO or press **¶** to reject connection.

Establish communication using one of these communication types:

- radio communication
- infrared communication.

Related information

[14. Grundfos Eye](#)

9.1.1 Radio communication

Radio communication can take place at distances up to 30 m. The first time Grundfos GO communicates with the pump, you must enable communication by pressing **¶** or **OK** on the pump control panel. Later when communication takes place, the pump is recognized by Grundfos GO and you can select the pump from the **List** menu.

9.1.2 Infrared communication

When communicating via infrared light, Grundfos GO must be pointed at the pump control panel.

10.2 Operating mode

Pump variant	Operating mode
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

Possible operating modes:

- **Normal**
The pump runs according to the selected control mode.
- **Stop**
The pump stops.
- **Min.**
Use the minimum-curve mode in periods in which a minimum flow is required.
- **Max.**
Use the maximum-curve mode in periods in which a maximum flow is required. This operating mode is for instance suitable for systems with hot-water priority.
- **Manual**
The pump is operating at a manually set speed. In **Manual** the setpoint via bus is overruled. See section Set manual speed.
- "User-defined speed"
The motor is operating at a speed set by the user. See section "Set user-defined speed".

All operating modes are illustrated in the figure below.

TM064024

Pos.	Description
2	Normal
3	Manual

Related information

[10.3 Set manual speed](#)

[10.4 User-defined speed](#)

10.3 Set manual speed

Pump variant	Set manual speed
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

This menu is only available in the advanced control panel. With Grundfos GO, you set the speed via the **Setpoint** menu.

You can set the pump speed in % of the maximum speed. When you have set the operating mode to **Manual**, the pump starts running at the set speed. The speed can then be changed manually via Grundfos GO or via the advanced control panel.

Factory setting

See section Factory settings.

Related information

[27. Factory settings](#)

10.4 User-defined speed

Use this function to set the motor speed in percentage of the maximum speed. When you have set the operating mode to **User-defined speed**, the pump starts running at the set speed.

10.5 "Control mode"

Pump variant	"Control mode"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

Possible control modes:

- **Prop. pressure** (proportional pressure)
- **Const. pressure** (constant pressure)
- **Const. temp.** (constant temperature)
- **Con. diff. press.** (constant differential pressure)
- **Con. diff. temp.** (constant differential temperature)
- **Const. flow rate** (constant flow rate)
- **Const. level** (constant level)
- **Const. other val.** (constant other value)
- **Const. curve** (constant curve).

The operating mode must be set to **Normal** before a control mode can be enabled.

Factory setting

See section Factory settings.

Related information

[27. Factory settings](#)

10.5.1 "Proportional pressure"

Pump variant	"Proportional pressure"
NBE, NBSE, NKE, TPE, TPED	-

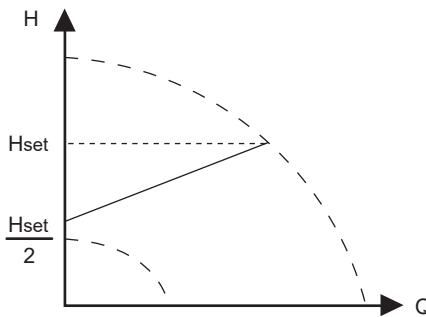

Pump variant	"Proportional pressure"
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The head of the pump is reduced at decreasing water demand and increased at rising water demand. See the figure below.

This control mode is especially suitable in systems with relatively large pressure losses in the distribution pipes. The head of the pump increases proportionally to the flow in the system to compensate for the large pressure losses in the distribution pipes.

The setpoint can be set with an accuracy of 0.1 metre. The head against a closed valve is half the setpoint.

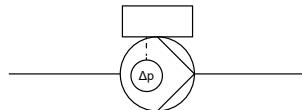

For more information about settings, see section "Proportional-pressure setup".

"Proportional pressure"

Example

- Factory-fitted differential-pressure sensor.

"Proportional pressure"

Controller settings

For recommended controller settings, see section "Controller" ("Controller settings").

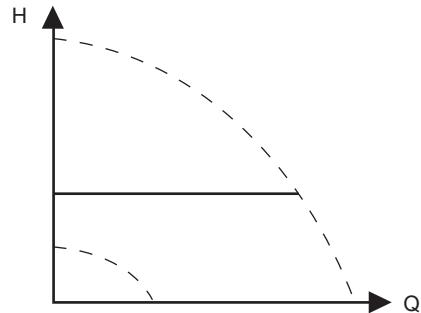

Related information

- [10.6 "Proportional-pressure setup"](#)
[10.14 "Controller" \("Controller settings"\)](#)

10.5.2 "Constant pressure"

Pump variant	"Constant pressure"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

We recommend this control mode if the pump is to deliver a constant pressure, independently of the flow in the system. The pump maintains a constant pressure independently of the flow rate. See the figure below.

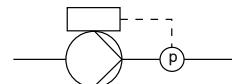

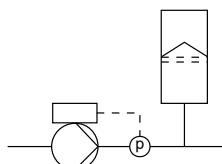

"Constant pressure"

This control mode requires an external pressure sensor as shown in the examples below. You can set the pressure sensor in the **Assist** menu. See section Assisted pump setup.

Examples

- One external pressure sensor.

"Constant pressure"

Controller settings

For recommended controller settings, see section "Controller" ("Controller settings").

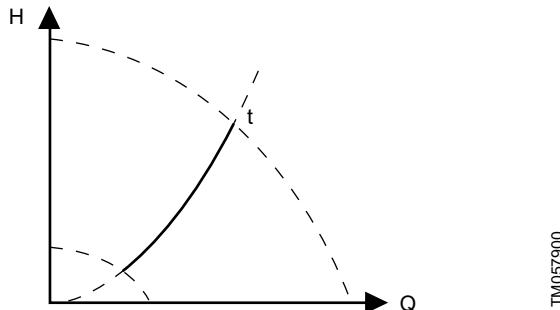

Related information

- [10.14 "Controller" \("Controller settings"\)](#)
[10.41 Assisted pump setup](#)

10.5.3 "Constant temperature"

Pump variant	"Constant temperature"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

This control mode ensures a constant temperature. Constant temperature is a comfort control mode that you can use in domestic hot-water systems to control the flow to maintain a constant temperature in the system. See the figure below.

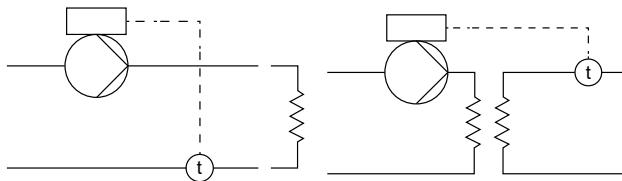

"Constant temperature"

This control mode requires an external temperature sensor. See the examples below.

Examples

- One external temperature sensor.

"Constant temperature"

Controller settings

For recommended controller settings, see section "Controller" ("Controller settings").

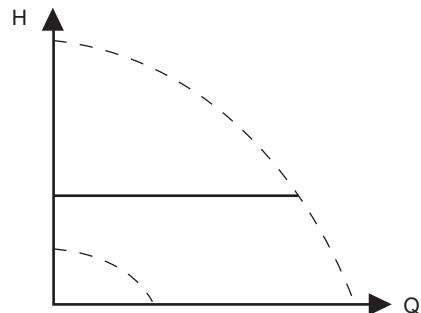

Related information

[10.14 "Controller" \("Controller settings"\)](#)

10.5.4 "Constant differential pressure"

Pump variant	"Constant differential pressure"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The pump maintains a constant differential pressure, independently of the flow in the system. See the figure below. This control mode is primarily suitable for systems with relatively small pressure losses.

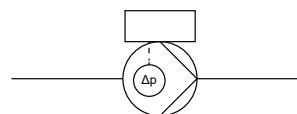

TM057901

"Constant differential pressure"

This control mode requires either an internal or external differential-pressure sensor or two external pressure sensors. See the examples below.

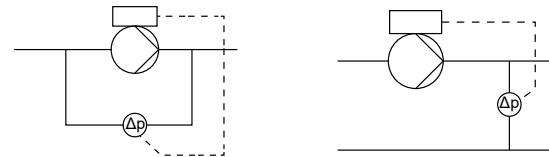

Examples

- Factory-fitted differential-pressure sensor, only NBE, NBSE, NKE, TPE, TPED Series 2000.

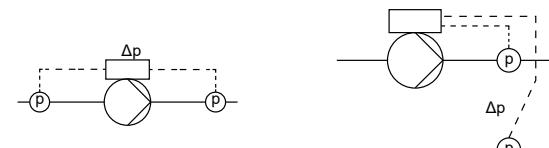

- One external differential-pressure sensor.

The pump uses the input from the sensor to control the differential pressure. You can set the sensor manually or by using the **Assist** menu. See section Assisted pump setup.

- Two external pressure sensors.

Constant differential-pressure control is achievable with two pressure sensors. The pump uses the inputs from the two sensors and calculates the differential pressure. The sensors must have the same unit and must be set as feedback sensors. You can set the sensors manually, sensor by sensor, or by using the **Assist** menu. See section Assisted pump setup.

"Constant differential pressure"

Controller settings

For recommended controller settings, see section "Controller" ("Controller settings").

10.5.5 "Constant differential temperature"

Pump variant	"Constant differential temperature"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The pump maintains a constant differential temperature in the system and the pump performance is controlled according to this. See the figure below.

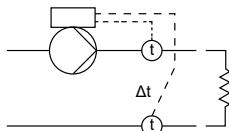

TM057954

"Constant differential temperature"

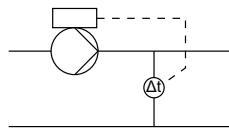

This control mode requires either two external temperature sensors or one external differential-temperature sensor. See the examples below.

Examples

- Two external temperature sensors.

 Δt

- One external differential-temperature sensor.

"Constant differential temperature"

Controller settings

For recommended controller settings, see section "Controller" ("Controller settings").

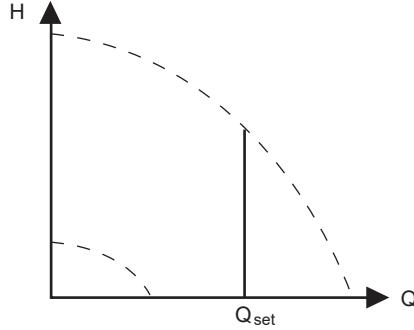

Related information

[10.14 "Controller" \("Controller settings"\)](#)

10.5.6 "Constant flow rate"

Pump variant	"Constant flow rate"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The pump maintains a constant flow in the system, independently of the head. See the figure below.

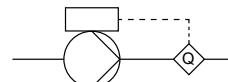

TM057955

"Constant flow rate"

This control mode requires an external flow sensor. See the example below.

Example

- One external flow sensor.

"Constant flow rate"

Controller settings

For recommended controller settings, see section "Controller" ("Controller settings").

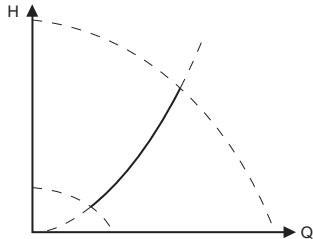

Related information

[10.14 "Controller" \("Controller settings"\)](#)

10.5.7 "Constant level"

Pump variant	"Constant level"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The pump maintains a constant level, independently of the flow rate. See the figure below.

TM057941

"Constant level"

This control mode requires an external level sensor.

The pump can control the level in a tank in two ways:

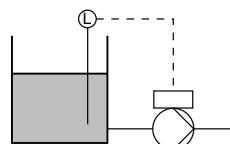

- as an emptying function where the pump draws the liquid from the tank.
- as a filling function where the pump pumps the liquid into the tank.

See the figures below.

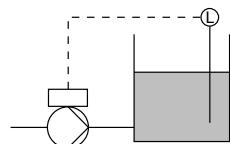

The type of level control function depends on the setting of the built-in controller. See section "Controller" ("Controller settings").

Examples

- One external level sensor.
 - emptying function.

- One external level sensor.
 - filling function.

"Constant level"

Controller settings

For recommended controller settings, see section "Controller" ("Controller settings").

Related information

[10.14 "Controller" \("Controller settings"\)](#)

10.5.8 "Constant other value"

Pump variant	"Constant other value"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

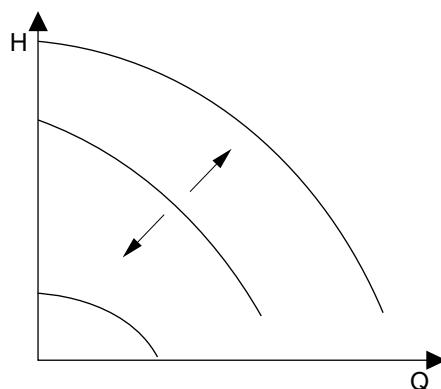

Any other value is kept constant.

10.5.9 "Constant curve"

Pump variant	" Constant curve "
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

You can set the pump to operate according to a constant curve, like an uncontrolled pump. See the figure below.

You can set the desired speed in % of the maximum speed in the range from 25 to 100 % (110 %).

TM057957

"Constant curve"

Controller settings

For recommended controller settings, see section "Controller" ("Controller settings").

Related information

[10.14 "Controller" \("Controller settings"\)](#)

10.6 "Proportional-pressure setup"

Pump variant	"Proportional-pressure setup"
NBE, NBSE, NKE, TPE, TPED	-
NBE, NBSE, NKE, TPE, TPED Series 2000	•

"Control-curve function"

You can set the curve either to quadratic or linear.

"Zero-flow head"

You can set this value in % of the setpoint. With a setting of 100 %, the control mode is equal to constant differential pressure.

10.7 Analog inputs

Pump variant	Analog inputs
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•
Function	Terminal*
Analog input 1, setup	4
Analog input 2, setup	7
Analog input 3, setup	14

* See section Connection terminals, advanced functional module, FM300.

Set the analog input for a feedback sensor via the **Assisted pump setup** menu. See section **Assisted pump setup**.

If you want to set an analog input for other purposes, you can do this manually.

You can set the analog inputs via the **Setup, analog input** menu. See section **Setup, analog input**.

If you perform the manual setting via Grundfos GO, you need to enter the menu for the analog input under the **Settings** menu.

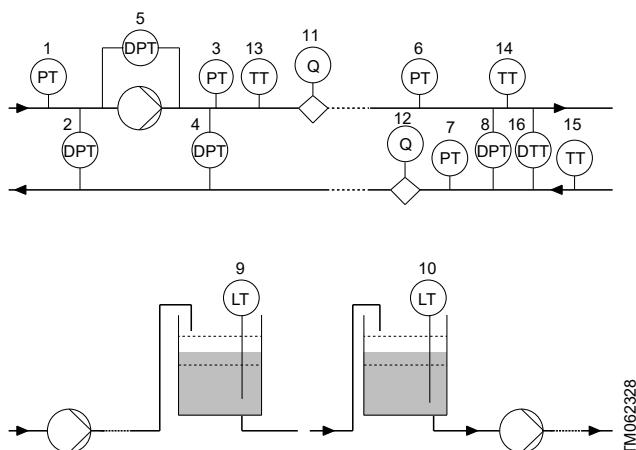

Function

You can set the analog inputs to these functions:

- **Not active**.
- **Feedback sensor**.
- **Ext. setpoint infl.** See section Setpoint influence.
- **Other function**.

Measured parameter

Select one of the parameters, such as the parameter to be measured in the system by the sensor connected to the actual analog input. See the figure below.

Overview of sensor locations

Sensor function, measured parameter	Pos.
Inlet pressure	1
Diff. press., inlet	2
Liquid temp.	3
Diff. press., outlet	4
Diff. press., pump	5
Operating mode	6
Press. 2, external	7

Sensor function, measured parameter	Pos.
Diff. press., ext.	8
Storage tank level	9
Feed tank level	10
Pump flow	11
Flow, external	12
Liquid temp.	13
Temperature 1	14
Temperature 2	15
Diff. temp., ext.	16
Ambient temp.	Not shown
Other parameter	Not shown

Unit

Available measuring units:

Parameter	Possible measuring units
Pressure	bar, m, kPa, psi, ft
Level	m, ft, in
Flow rate	m ³ /h, l/s, yd ³ /h, gpm
Liquid temp.	°C, °F
Other parameter	%

"Electrical signal"

Select signal type:

- **0-5-3.5 V**
- **0-5 V**
- **0-10 V**
- **0-20 mA**
- **4-20 mA**.

Sensor range, minimum value

Set the minimum value of the connected sensor.

Sensor range, maximum value

Set the maximum value of the connected sensor.

Factory setting

See section Factory settings.

10.7.1 Setting two sensors for differential measurement

To measure the difference of a parameter between two points, set the corresponding sensors as follows:

Parameter	Analog input for sensor 1	Analog input for sensor 2
Pressure, option 1	Differential pressure, inlet	Differential pressure, outlet
Pressure, option 2	Pressure 1, external	Pressure 2, external
Flow	Pump flow	Flow, external
Temperature	Temperature 1	Temperature 2

If you want to use the control mode Constant differential pressure, you must choose the function **Feedback sensor** for the analog input of both sensors.

10.8 Built-in Grundfos sensor

Pump variant	Built-in Grundfos sensor
NBE, NBSE, NKE, TPE, TPED	-
NBE, NBSE, NKE, TPE, TPED Series 2000	•

You can select the function of the built-in sensor in the Built-in Grundfos sensor menu.

Set the Built-in Grundfos sensor via the **Assisted pump setup** menu. See section **Assisted pump setup**.

If you perform the setting manually in the advanced control panel, you must enter the **Analog inputs** menu under the **Settings** menu in order to access the Built-in Grundfos sensor menu.

If you perform the setting manually via Grundfos GO, you need to enter the menu for the Built-in Grundfos sensor under the **Settings** menu.

Function

You can set the built-in sensor to these functions:

- Grundfos diff.-pressure sensor
 - **Not active**
 - **Feedback sensor**
 - **Setpoint infl.**
See section Setpoint influence.
 - **Other function.**

Factory setting

See section Factory settings.

10.9 Pt100/1000 inputs

Pump variant	Pt100/1000 inputs
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•
Function	Terminal
Pt100/1000 input 1, setup	17 and 18
Pt100/1000 input 2, setup	18 and 19

* See section Connection terminals, advanced functional module, FM 300.

Set the Pt100/1000 input for a feedback sensor via the **Assisted pump setup** menu. See section **Assisted pump setup**.

If you want to set a Pt100/1000 input for other purposes, you can do this manually.

You can set the analog inputs via the **Setup, analog input** menu. See section **Setup, analog input**.

If you perform the manual setting via Grundfos GO, you need to enter the menu for the Pt100/1000 input under the **Settings** menu.

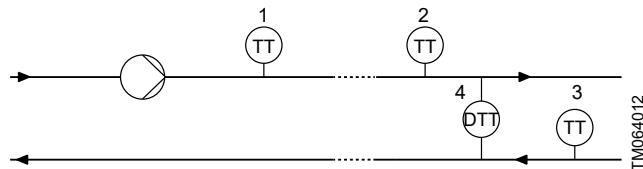

Function

You can set the Pt100/1000 inputs to these functions:

- **Not active**
- **Feedback sensor**
- **Ext. setpoint infl.**
See section Setpoint influence.
- **Other function.**

Measured parameter

Select one of the parameters, such as the parameter to be measured in the system by the Pt100/1000 sensor connected to the actual Pt100/1000 input. See the figure below.

Overview of Pt100/1000 sensor locations

Parameter	Pos.
Liquid temp.	1
Temperature 1	2
Temperature 2	3
Ambient temp.	Not shown

Measuring range

-58 to 399 °F (-50 to 204 °C).

Factory setting

See section Factory settings.

10.10 Digital inputs

Pump variant	Digital inputs
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

Function	Terminal*
Digital input 1, setup	2 and 6
Digital input 2, setup	1 and 9

* See section Connection terminals, advanced functional module, FM 300.

To set a digital input, make the settings below.

Function

Select one of these functions:

- **Not active**
When set to **Not active**, the input has no function.
- **External stop**
When the input is deactivated, open circuit, the pump stops.
- **Min. (minimum speed)**
When the input is activated, the pump runs at the set minimum speed.
- **Max. (maximum speed)**
When the input is activated, the pump runs at the set maximum speed.
- "User-defined speed"
When the input is activated, the motor runs at a speed set by the user.
- **External fault**
When the input is activated, a timer is started. If the input is activated for more than 5 seconds, the pump stops and a fault is indicated. This function depends on input from external equipment.
- **Alarm resetting**
When the input is activated, a possible fault indication is reset.
- **Dry running**
When this function has been selected, lack of inlet pressure or water shortage can be detected. When lack of inlet pressure or water shortage, dry running, is detected, the pump stops.
The pump cannot restart as long as the input is activated. This requires the use of an accessory, such as:
 - a pressure switch installed on the inlet side of the pump
 - a float switch installed on the inlet side of the pump.
- **Accumulated flow**
When this function has been selected, the accumulated flow can be registered. This requires the use of a flowmeter which gives a feedback signal as a pulse per defined flow of water. See section "Pulse flowmeter setup".
- **Predefined setpoint digit 1**, applies only to digital input 2.
When digital inputs are set to predefined setpoint, the pump operates according to a setpoint based on the combination of the activated digital inputs. See section "Predefined setpoints".
- **Activate output**
When the input is activated, the related digital output is activated. See section Digital inputs/outputs. This is done without any changes to pump operation.
- **Local motor stop**
When the input is activated, the given pump in a multipump system stops without affecting the performance of the other pumps in the system.

The priority of the selected functions in relation to each other appears from section Priority of settings.

A stop command always has the highest priority.

Activation delay

Select the activation delay, T1.

It is the time between the digital signal and the activation of the selected function.

Range: 0 to 6000 seconds.

Duration timer mode

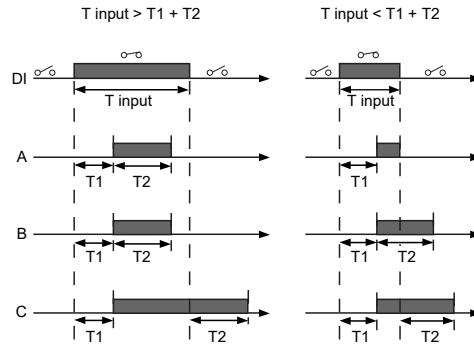

Select the mode. See the figure below.

- **Not active**
- active with interrupt, mode A
- active without interrupt, mode B
- active with after-run, mode C.

Select the duration time, T2.

It is the time which, together with the mode, determines how long the selected function is active.

Range: 0 to 15,000 seconds.

TM064949

Duration timer function of digital inputs

Pos.	Description
T1	T input
DI	Digital input
A, B, C	Modes

Factory setting

See section Factory settings.

10.11 Digital inputs/outputs

Pump variant	Digital inputs/outputs
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•
Function	Terminal*
Digital input/output 3, setup	10 and 16
Digital input/output 4, setup	11 and 18

* See section Connection terminals, advanced functional module, FM 300.

You can select if the interface must be used as input or output. The output is an open collector and you can connect it to for example an external relay or controller such as a PLC.

TM064463

Example of configurable digital inputs or outputs

Pos.	Description
1	External controller

To set a digital input or output, make the settings below.

Mode

You can set the digital input or output 3 and 4 to act as digital input or digital output:

- Digital input
- Digital output.

Function

You can set the digital input or output 3 and 4 to these functions:

Possible functions, digital input or output 3

Function if input	Function if output
See details in section Digital inputs	See details in section "Signal relays 1 and 2" (Relay outputs)
• Not active	• Not active
• External stop	• Ready
• Min.	• Alarm
• Max.	• Operation
• "User-defined speed"	• Pump running
• External fault	• Warning
• Alarm resetting	• Limit 1 exceeded
• Dry running	• Limit 2 exceeded
• Accumulated flow	• "Digital input 1, state"
• "Predefined setpoint digit 2"	• "Digital input 2, state"
• "Activate output"	• "Digital input 3, state"
• "Local motor stop"	• "Digital input 4, state"

Possible functions, digital input or output 4

Function if input	Function if output
See details in section Digital inputs	See details in section "Signal relays 1 and 2" (Relay outputs)

Activation delay

Select the activation delay, T1.

It is the time between the digital signal and the activation of the selected function.

Range: 0 to 6000 seconds.

Duration timer mode

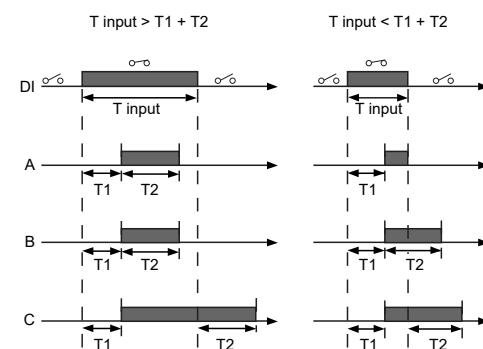

Select the mode. See the figure below.

- Not active
- active with interrupt, mode A
- active without interrupt, mode B
- active with after-run, mode C.

Select the duration time, T2.

It is the time which, together with the mode, determines how long the selected function is active.

Range: 0 to 15,000 seconds.

TM064949

Duration timer function of digital inputs

Pos.	Description
T1	T input
DI	Digital input
A, B, C	Modes

Factory setting

10.12 "Signal relays 1 and 2" (Relay outputs)

Pump variant	"Signal relays 1 and 2"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•
Function	Terminal*
Relay output 1	NC, C1, NO
Relay output 2	NC, C2, NO

* See section Connection terminals, advanced functional module, FM 300.

The pump incorporates two signal relays for potential-free signalling. For further information, see section Signal relays.

Function

You can configure the signal relays to be activated by one of the following incidents:

- **Not active.**
- **Ready**
The pump can be running or is ready to run and no alarms are present.
- **Alarm**
There is an active alarm and the pump is stopped.
- **"Operating" (Operation)**
"Operating" equals "Running" but the pump is still in operation when it has been stopped due to a warning.
- **"Running" (Pump running)**
- **Warning**
There is an active warning.
- **"Digital input 1, state"**
Follows digital input 1. If digital input 1 is activated, output is also activated.
- **"Digital input 2, state"**
Follows digital input 2. If digital input 2 is activated, output is also activated.
- **"Digital input 3, state"**
Follows digital input 3. If digital input 3 is activated, output is also activated.
- **"Digital input 4, state"**
Follows digital input 4. If digital input 4 is activated, output is also activated.
- **Limit 1 exceeded**
When the **Limit 1 exceeded** function is activated, the signal relay is activated. See section Limit-exceeded function.
- **Limit 2 exceeded**
When the **Limit 2 exceeded** function is activated, the signal relay is activated. See section Limit-exceeded function.
- **Relubricate**
- **"External fan control" (Control of external fan)**
When you select "External fan control", the relay is activated if the internal temperature of the motor electronics reach a preset limit value.

Factory setting

See section Factory settings.

10.13 Analog output

Pump variant	Analog output
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

Function	Terminal*
Analog output	12

* See section Connection terminals, advanced functional module, FM 300.

The analog output enables the transfer of certain operating data to external control systems.

To set the analog output, make the settings below.

Output signal

- **0-10 V**
- **0-20 mA**
- **4-20 mA**.

Function of analog output

- **Actual speed.**

Signal range [V, mA]	Actual speed [%]		
	0	100	200
0-10 V	0 V	5 V	10 V
0-20 mA	0 mA	10 mA	20 mA
4-20 mA	4 mA	12 mA	20 mA

The reading is a percentage of nominal speed.

- **Actual value**

Signal range [V, mA]	Actual value	
	Sensor _{min}	Sensor _{max}
0-10 V	0 V	10 V
0-20 mA	0 mA	20 mA
4-20 mA	4 mA	20 mA

The reading is a percentage of the range between sensor_{min} and sensor_{max}.

- **Resulting setpoint**

Signal range [V, mA]	Resulting setpoint [%]	
	0	100
0-10 V	0 V	10 V
0-20 mA	0 mA	20 mA
4-20 mA	4 mA	20 mA

The reading is a percentage of the external setpoint range.

- **Motor load**

Signal range [V, mA]	Motor load	
	[%]	[%]
0	0	100
0-10 V	0 V	10 V
0-20 mA	0 mA	20 mA
4-20 mA	4 mA	20 mA

The reading is a percentage of the range between 0 and 100 % of the maximum permissible load at the actual speed.

- **Motor current**

Signal range [V, mA]	Motor current		
	[%]	0	100
0-10 V	0 V	5 V	10 V
0-20 mA	0 mA	10 mA	20 mA
4-20 mA	4 mA	12 mA	20 mA

The reading is a percentage of the range between 0 and 100 % of the rated current.

- **Limit 1 exceeded and Limit 2 exceeded**

Signal range [V, mA]	Limit-exceeded function	
	Output not active	Output active
0-10 V	0 V	10 V
0-20 mA	0 mA	20 mA
4-20 mA	4 mA	20 mA

The **Limit-exceeded function** is typically used for monitoring of secondary parameters in the system. If the limit is exceeded, an output, warning or alarm is activated.

- **Flow rate**

Signal range [V, mA]	Flow rate		
	[%]	0	100
0-10 V	0 V	5 V	10 V
0-20 mA	0 mA	10 mA	20 mA
4-20 mA	4 mA	12 mA	20 mA

The reading is a percentage of the range between 0 and 100 % of the nominal flow.

Factory setting

See section Factory settings.

Related information

[27. Factory settings](#)

10.14 "Controller" ("Controller settings")

Pump variant	"Controller"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The pumps have a factory setting of gain, K_p , and integral time, T_i . However, if the factory setting is not the optimum setting, you can change the gain and the integral time.

- Set the gain within the range from 0.1 to 20.

- Set the integral time within the range from 0.1 to 3600 seconds. If you select 3600 seconds, the controller functions as a P controller.

Furthermore, you can set the controller to inverse control. This means that if the setpoint is increased, the speed is reduced. In the case of inverse control, the gain must be set within the range from -0.1 to -20.

Guidelines for setting of PI controller

The tables below show the recommended controller settings:

"Differential-pressure control"	K_p	T_i
	0.5	0.5
	0.5	L1 < 5 m: 0.5 L1 > 5 m: 3 L1 > 10 m: 5
	0.5	

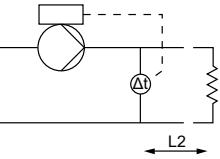

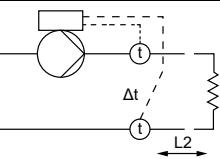

L1: distance in meters between pump and sensor.

"Temperature control"	K_p		T_i
	Heating system 1)	Cooling system 2)	
	0.5	-0.5	10 + 5L2
	0.5	-0.5	30 + 5L2

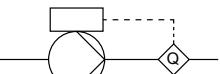

¹⁾ In heating systems, an increase in pump performance results in a rise in temperature at the sensor.

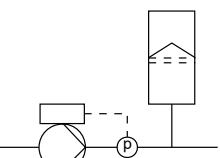

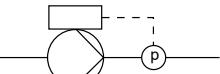

²⁾ In cooling systems, an increase in pump performance results in a drop in temperature at the sensor.

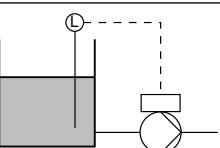

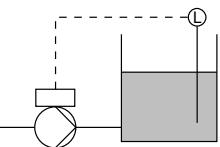

L2: distance in meters between heat exchanger and sensor.

"Differential-temperature control"	K_p	T_i
	-0.5	$10 + 5L2$
		

L2: distance in meters between heat exchanger and sensor.

"Flow control"	K_p	T_i
	0.5	0.5

"Constant pressure control"	K_p	T_i
	0.5	0.5
	0.1	0.5

"Level control"	K_p	T_i
	-2.5	100
	2.5	100

Rules of thumb

If the controller is too slow-reacting, increase the gain.

If the controller is hunting or unstable, dampen the system by reducing the gain or increasing the integral time.

Factory setting

See section Factory settings.

10.16 External setpoint function

Pump variant	External setpoint function
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

You can influence the setpoint by an external signal, either via one of the analog inputs or, if an advanced functional module is fitted, via one of the Pt100/1000 inputs.

Before you can enable the **External setpoint function**, you must set one of the analog inputs or Pt100/1000 inputs to **Setpoint influence**.

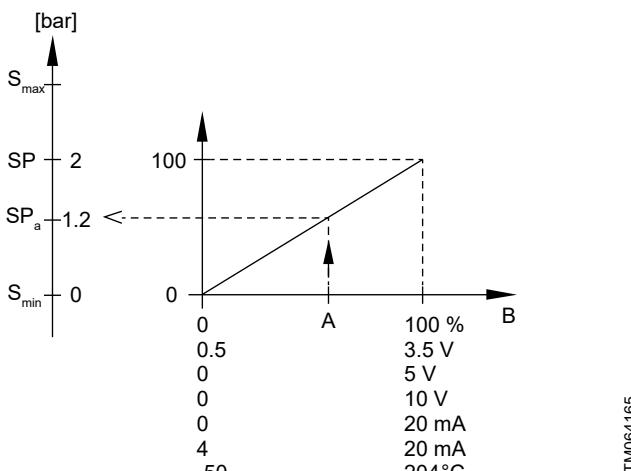

See sections Analog inputs and Pt100/1000 inputs.

If more than one input has been set to **Setpoint influence**, the function selects the analog input with the lowest number, for example **Setting of pump**, and ignores the other inputs, for example **Analog input 3** or "Pt100/1000 input 1". Only one input should be used for setpoint influence.

Example with constant pressure with linear influence

Actual setpoint: actual input signal x (setpoint - sensor min.) + sensor min.

At a lower sensor value of 0 bar, a setpoint of 2 bar and an external setpoint of 60 %, the actual setpoint is $0.60 \times (2 - 0) + 0 = 1.2$ bar.

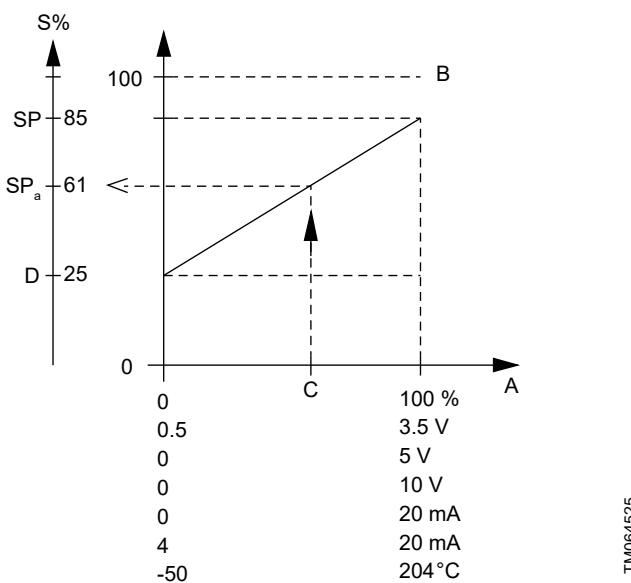

**Example of setpoint influence with sensor feedback**

Pos.	Description
A	Actual input signal, 60 %
B	External setpoint signal
S _{max}	Sensor max.
SP	Setpoint
SP _a	Actual setpoint
S _{min}	Sensor min.

Example with constant curve with linear influence

Actual setpoint: actual input signal x (setpoint - user-set minimum speed) + user-set minimum speed.

At a user-set minimum speed of 25 %, a setpoint of 85 % and an external setpoint of 60 %, the actual setpoint is $0.60 \times (85 - 25) + 25 = 61$ %. See the figure below.

**Example of setpoint influence with constant curve**

Pos.	Description
A	External setpoint signal
B	Fixed maximum speed
C	Actual input signal, 60 %
D	User-set minimum speed
S%	Speed [%]
SP	Setpoint
SP _a	Actual setpoint

Factory setting

See section Factory settings.

10.16.1 Setpoint influence

Pump variant	Setpoint influence
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The table below gives an overview of the types of setpoint influence and the availability depending on pump type.

Setpoint influence	Pump type	
	NBE, NBSE, NKE, TPE, TPED	NBE, NBSE, NKE, TPE, TPED Series 2000
Not active	•	•
Linear function	•	•
Linear with Stop	•	•
Influence table	•	•

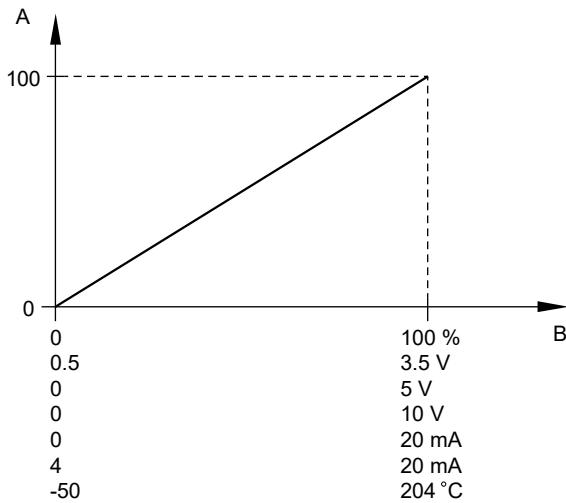

You can select these functions:

- Not active**

When set to **Not active**, the setpoint is not influenced from any external function.

- Linear function**

The setpoint is influenced linearly from 0 to 100 %. See the figure below.

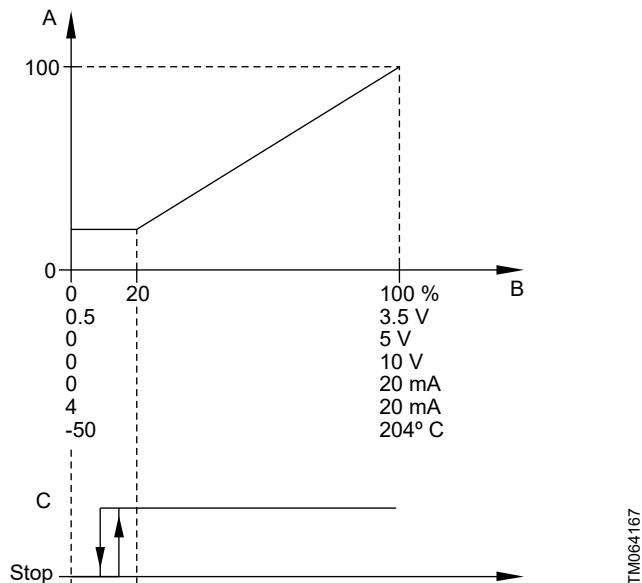

Linear function

Pos.	Description
A	Setpoint influence [%]
B	External input

- Linear with Stop**

- In the input signal range from 20 to 100 %, the setpoint is influenced linearly. If the input signal is below 10 %, the pump changes to operating mode **Stop**. If the input signal is above 15 %, the operating mode is changed back to **Normal**. See the figure below.

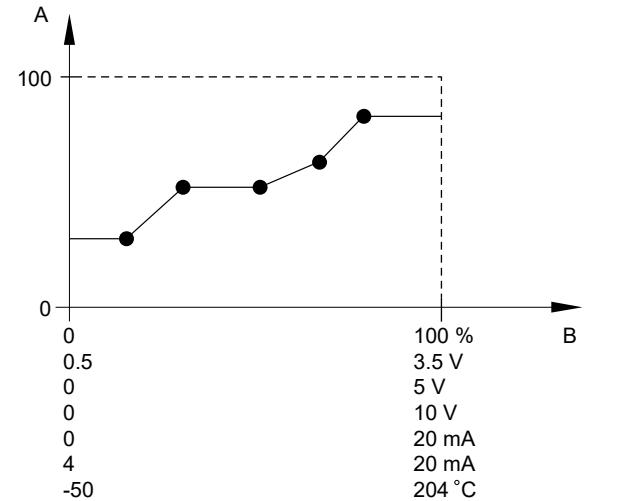

Linear with Stop

Pos.	Description
A	Setpoint influence [%]

Pos.	Description
B	External input
C	Normal

- Influence table**

The setpoint is influenced by a curve made out of two to eight points. There will be a straight line between the points and a horizontal line before the first point and after the last point.

Influence table, example with five points

Pos.	Description
A	Setpoint influence [%]
B	External input

Before the **Digital inputs** can be enabled, set one of the analog inputs or Pt100/1000 inputs to **External setpoint function**.

See sections Analog inputs and Pt100/1000 inputs.

Related information

[10.7 Analog inputs](#)

[10.9 Pt100/1000 inputs](#)

10.16.2 "Predefined setpoints"

Pump variant	"Predefined setpoints"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

You can set and activate seven predefined setpoints by combining the input signals to digital inputs 2, 3 and 4. See the table below.

Set the digital inputs 2, 3 and 4 to "Predefined setpoints" if all seven predefined setpoints are to be used. You can also set one or two of the digital inputs to "Predefined setpoints" but this limits the number of predefined setpoints available.

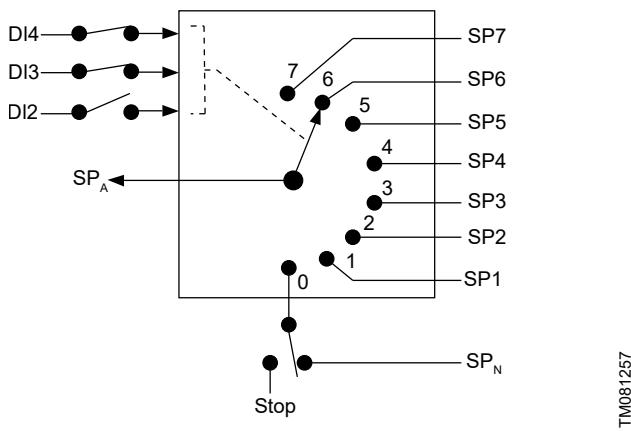

Digital inputs			Setpoint
2	3	4	
0	0	0	Normal setpoint or stop
1	0	0	Predefined setpoint 1
0	1	0	Predefined setpoint 2
1	1	0	Predefined setpoint 3

Digital inputs				Setpoint
2	3	4		
0	0	1		Predefined setpoint 4
1	0	1		Predefined setpoint 5
0	1	1		Predefined setpoint 6
1	1	1		Predefined setpoint 7

0: Open contact
1: Closed contact

Example

The figure below shows how you can use the digital inputs to set seven predefined setpoints. Digital input 2 is open and digital inputs 3 and 4 are closed. If you compare with the table above, you can see that "Predefined setpoint 6" is activated.

Principle sketch showing how predefined setpoints function

Pos.	Description
DI4	Digital input 4
DI3	Digital input 3
DI2	Digital input 2
SP _A	Actual setpoint
SP7	Setpoint 7
SP6	Setpoint 6
SP5	Setpoint 5
SP4	Setpoint 4
SP3	Setpoint 3
SP2	Setpoint 2
SP1	Setpoint 1
SP _N	Normal setpoint

If all digital inputs are open, the pump either stops or runs at the normal setpoint. Set the desired action with Grundfos GO or with the advanced control panel.

Factory setting

See section Factory settings.

[27. Factory settings](#)

10.17 Limit-exceeded function

Pump variant	Limit-exceeded function
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

This function can monitor a measured parameter or one of the internal values such as speed, motor load or motor current. If a set limit is reached, a selected action can take place. You can set two limit-exceeded functions meaning that you can monitor two parameters or two limits of the same parameter simultaneously.

The function requires setting of the following:

Measured

Here you set the measured parameter to be monitored.

"Limit"

Here you set the limit which activates the function.

"Hysteresis band"

Here you set the hysteresis band.

"Limit exceeded when"

Here you can set the function to be activated when the selected parameter exceeds or drops below the set limit.

- "Above limit"
The function is activated if the measured parameter exceeds the set limit.
- "Below limit"
The function is activated if the measured parameter drops below the set limit.

Action

If the value exceeds a limit, you can define an action. You can select the following actions:

- "No action"
The pump remains in its current state. Use this setting if you only want to have a relay output when the limit is reached. See section "Signal relays 1 and 2" (Relay outputs).
- "Warning/alarm"
There is a warning.
- **Stop**
The pump stops.
- **Min.**
The pump reduces speed to minimum.
- **Max.**
The pump increases speed to maximum.
- "User-defined speed"
The pumps runs at a speed set by the user.

"Detection delay"

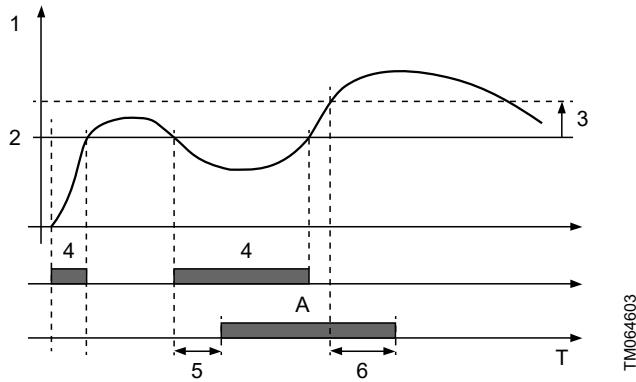

You can set a detection delay which ensures that the monitored parameter stays above or below a set limit in a set time before the function is activated.

"Resetting delay"

The resetting delay is the time from which the measured parameter differs from the set limit including the set hysteresis band and until the function is reset.

Example

The function is to monitor the outlet pressure of a pump. If the pressure is below 5 bar for more than 5 seconds, a warning must be given. If the outlet pressure is above 7 bar for more than 8 seconds, you must reset the warning.

"Limit exceeded" (example)

Pos.	Setting parameter	Setting
1	Measured	"Outlet pressure"
2	"Limit"	5 bar
3	"Hysteresis band"	2 bar
4	"Limit exceeded when"	"Below limit"
5	"Detection delay"	5 seconds
6	"Resetting delay"	8 seconds
A	Limit-exceeded function active	-
-	"Action"	"Warning"

Factory setting

See section Factory settings.

10.18 "Pulse flowmeter setup"

Pump variant	"Pulse flowmeter setup"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

You can connect an external pulse flowmeter to one of the digital inputs in order to register the actual and accumulated flows. Based on this, you can also calculate the specific energy.

To enable a pulse flowmeter, set one of the digital-input functions to **Accumulated flow** and set the pumped volume per pulse. See section Digital inputs.

Factory setting

See section Factory settings.

10.19 "Ramps"

Pump variant	"Ramps"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The ramps determine how quickly the motor can accelerate and decelerate, respectively, during start-stop or setpoint changes.

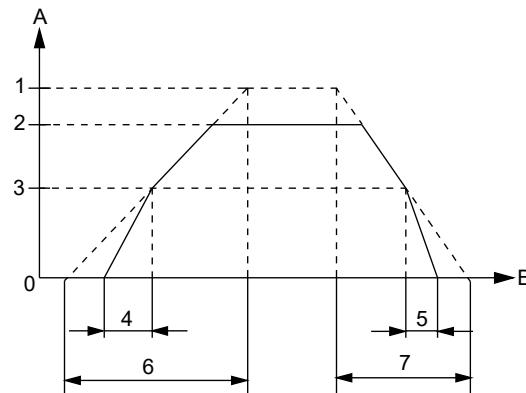

You can set the following:

- acceleration time, 0.1 to 300 seconds
- deceleration time, 0.1 to 300 seconds.

The times apply to the acceleration from 0 rpm to fixed maximum speed and the deceleration from fixed maximum speed to 0 rpm.

At short deceleration times, the deceleration of the motor may depend on load and inertia as there is no possibility of actively braking the motor.

If the power supply is switched off, the deceleration of the motor only depends on load and inertia.

Ramp-up and ramp-down

Pos.	Description
A	Speed
B	Time
1	Fixed maximum
2	User set maximum
3	User set minimum
4	Fixed initial ramp
5	Fixed final ramp
6	User set ramp-up
7	User set ramp-down

Factory setting

See section Factory settings.

10.20 "Standstill heating"

Pump variant	"Standstill heating"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

You can use this function to avoid condensation in humid environments. When you set the function to "Active" and the pump is in operating mode **Stop**, a low AC voltage is applied to the motor windings. The voltage is not high enough to make the motor rotate but ensures that sufficient heat is generated to avoid condensation in the motor including the electronic parts in the drive.

Remember to remove the drain plugs and fit a cover over the motor.

10.21 Motor bearing monitoring

Pump variant	Motor bearing monitoring
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

You can set the motor bearing monitoring function to these values:

- "Active"
- **Not active**

When the function is set to "Active", a counter in the controller starts counting the mileage of the bearings.

When the function is changed to "Active" again, the accumulated mileage is again used to calculate the replacement time.

Factory setting

See section Factory settings.

10.22 "Service"

Pump variant	"Service"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

"Time until next service" (Motor bearing service)

This display shows when to replace the motor bearings. The controller monitors the operating pattern of the motor and calculates the period between bearing replacements.

Displayable values:

- "in 2 years"
- "in 1 year"
- "in 6 months"
- "in 3 months"
- "in 1 month"
- "in 1 week"
- "Now"

"Bearing replacements"

Indicates the number of bearing replacements that have been done during the lifetime of the motor.

Bearings replaced (Motor bearing maintenance)

When the bearing monitoring function is active, the controller gives a warning when the motor bearings are to be replaced.

When you have replaced the motor bearings, confirm this action by pressing [Bearings replaced].

10.23 "Number" (Pump number)

Pump variant	"Number"
NBE, NBSE, NKE, TPE, TPED	•

Pump variant	"Number"
NBE, NBSE, NKE, TPE, TPED Series 2000	•

You can allocate a unique number to the pump. This makes it possible to distinguish between pumps in connection with bus communication.

- "Delete operating log".
- "Delete heat energy data".
- "Delete energy consumption".

10.30 Define Home display

Pump variant	Define Home display
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

This menu is only available in the advanced control panel.

In this menu, you can set the **Home** display to show up to four user-set parameters.

10.31 Display settings

Pump variant	Display settings
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

This menu is only available in the advanced control panel.

In this menu you can adjust the display brightness and set whether or not the display is to turn off if no buttons have been activated for a period of time.

10.32 "Store settings" (Store actual settings)

Pump variant	"Store settings"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

Grundfos GO

In this menu, you can store the actual settings for later use in the same pump or in other pumps of the same type.

Advanced control panel

In this menu, you can store the actual settings for later use in the same pump.

10.33 "Recall settings" (Recall stored settings)

Pump variant	"Recall settings"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

Grundfos GO

In this menu, you can recall stored settings from a number of previously stored settings that the pump then uses.

Advanced control panel

In this menu, you can recall the last stored settings that the pump then uses.

10.34 "Undo"

Pump variant	"Undo"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

This menu is only available in Grundfos GO.

In this display, you can undo all settings that have been made with Grundfos GO in the current communication session. You cannot undo a **Recall stored settings** action.

10.35 "Pump name"

Pump variant	"Pump name"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

This menu is only available in Grundfos GO.

In this display, you can give the pump a name. In this way, you can easily identify the pump when connecting with Grundfos GO.

Factory setting

See section Factory settings.

Related information

[27. Factory settings](#)

10.36 "Connection code"

Pump variant	"Connection code"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

This menu is only available in Grundfos GO.

You can set a connection code to avoid having to press the connection button each time and to restrict remote access to the product.

Setting the code in the product using Grundfos GO

1. Connect Grundfos GO to the product.
2. In the product dashboard, select "Settings".
3. Choose "Connection code".
4. Enter the wanted code and press [OK]. The code must be a character string, ASCII. You can always modify the code. The old code is not needed.

Setting the code in Grundfos GO

You can set a default connection code in Grundfos GO so that it automatically attempts to connect to the selected product via this code.

When you select a product with the same connection code in Grundfos GO, Grundfos GO automatically connects to the product and you do not have to press the connection button on the module.

Set the default code in Grundfos GO in this way:

1. In the main menu, under "General", select "Settings".
2. Choose "Remote".
3. Enter the connection code in the field "Preset connection code".
The field now says "Connection code set".

You can always modify the default connection code by pressing [Delete] and entering a new one.

If Grundfos GO fails to connect and ask you to press the connection button on the product, it means that the product has no connection code or has a different connection code. In this case, you can only establish connection via the connection button.

After setting a connection code, you must switch off the product until the light in Grundfos Eye turns off before you can use the new connection code.

Factory setting

See section Factory setting.

NBE, NBSE, NKE, TPE, TPED Series 2000	•

The menu consist of functions which take you through the steps needed to set the pump.

10.41 Assisted pump setup

Pump variant	Assisted pump setup
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The menu guides you through the following:

Setting of pump

- Selection of control mode. See section "Control mode".
- Configuration of feedback sensors.
- Adjusting the setpoint. See section Setpoint.
- Controller settings. See section "Controller" ("Controller settings").
- Summary of settings.

Example of how to use the Assisted pump setup for setting up the pump to constant pressure:

Grundfos GO

- Open the **Assist** menu.
- Select **Assisted pump setup**.
- Select the control mode "Constant pressure".
- Read the description of this control mode.
- Select which analog input to use as sensor input.
- Select sensor function according to where the sensor is installed in the system. See fig. Overview of sensor locations.
- Select electrical input signal according to the sensor specifications.
- Select measuring unit according to the sensor specifications.
- Set the minimum and maximum sensor values according to the sensor specifications.
- Set the desired setpoint.
- Set the controller settings K_p and T_i . See the recommendations in section "Controller" ("Controller settings").
- Type the pump name.
- Check the summary of settings and confirm them.

Advanced control panel

- Open the **Assist** menu.
- Select **Assisted pump setup**.
- Select the control mode **Const. pressure**.
- Select which analog input to be used as sensor input.
- Select the measured parameter to be controlled. See fig. Overview of sensor locations.
- Select measuring unit according to the sensor specifications.
- Set the minimum and maximum sensor values according to the sensor specifications.
- Select electrical input signal according to the sensor specifications.
- Set the setpoint.

10. Set the controller settings K_p and T_i . See recommendations in section "Controller" ("Controller settings").

11. Check the summary of settings and confirm them by pressing [OK].

10.43 "Multipump setup" (Setup of multi-pump system)

Pump variant	"Multipump setup"
NBE, NBSE, NKE, TPE, TPED	•
NBE, NBSE, NKE, TPE, TPED Series 2000	•

The multipump function enables the control of two pumps connected in parallel without the use of external controllers. The pumps in a multipump system communicate with each other via the wireless GENlair connection or the wired GENI connection.

A multipump system is set via a selected pump, i.e. the master pump, which is the first selected pump.

If two pumps in the system are configured with an outlet-pressure sensor, both pumps can function as master pumps and take over the master pump function if the other fails. This provides additional redundancy in the multipump system.

The multipump functions are described in the following sections.

10.43.1 Alternating operation

Alternating operation functions as a duty/standby operating mode and is possible with two pumps of same size and type connected in parallel. The main purpose of the function is to ensure an even amount of running hours and to ensure that the standby pump takes over if the running pump stops due to an alarm.

Each pump requires a non-return valve in series with the pump. You can choose between two alternating operation modes:

- "Alternating operation, time"
Pump changeover to the other is based on time.
- "Alternating operation, energy"
Pump changeover to the other is based on energy consumption.

If the duty pump fails, the other pump takes over automatically.

10.43.2 Backup operation

Backup operation is possible with two pumps of same size and type connected in parallel. Each pump requires a non-return valve in series with the pump.

One pump is operating continuously. The backup pump is operated for a short time each day to prevent seizing up. If the duty pump stops due to a fault, the backup pump starts automatically.

10.43.3 Cascade operation

Cascade operation ensures that the pump performance is automatically adapted to the consumption by switching pumps on or off. The system thus runs as energy-efficiently as possible with a constant pressure and a limited number of pumps.

All pumps in operation run at equal speed. Pump changeover is automatic and depends on energy, operating hours and fault.

If the pump system consists of two to four single-head pumps connected in parallel, the pumps must be of the same type and size. Each pump requires a non-return valve in series with the pump.

Set the control mode to "Constant pressure" or "Constant curve". In "Constant curve" all pumps will run at the same time.

This function is available with up to 4 motors installed in parallel. The motors must be of the same size and the pumps must be of the same model.

- The performance is adjusted to the demand through cutting pumps in or out and through parallel control of the pumps in operation.
- The controller maintains a constant pressure through continuous adjustment of the speed of the pumps.
- Pump changeover is automatic and depends on load, operating hours and fault detection.
- All pumps in operation run at the same speed.
- The number of pumps in operation also depends on the energy consumption of the pumps. If only one pump is required, two pumps will run at a lower speed if this results in a lower energy consumption.
- If several motors in the system have a sensor, they can all function as master and take over the master function if the other motors fail.

10.43.4 Sensor to be used

Define the sensor to be used for controlling the pump system. If a sensor is placed in a way that it is able to measure the sensor output from all pumps in the system, for example, in the manifold, then select Master pump sensor.

If a sensor is placed on, or across the individual pumps, for example, installed behind non-return valves and not able to measure the sensor output from all pumps, then select Running pump sensor.

10.43.5 Setting a multipump system

You can set a multipump system in the following ways:

- Grundfos GO and wireless pump connection
- Grundfos GO and wired pump connection
- Advanced control panel and wireless pump connection
- Advanced control panel and wired pump connection

See step-by-step descriptions below.

Grundfos GO and wireless pump connection

1. Power on both pumps.
2. Establish contact to one of the pumps with Grundfos GO.
3. Set the needed analog and digital inputs via Grundfos GO according to the connected equipment and the required functionality. See section Assisted pump setup.
4. Assign a pump name to the pump using Grundfos GO. See section "Pump name".
5. Disconnect Grundfos GO from the pump.

6. Establish contact to the other pump.

7. Set the needed analog and digital inputs via Grundfos GO according to the connected equipment and the required functionality. See section Assisted pump setup.

8. Assign a pump name to the pump using Grundfos GO. See section "Pump name".

9. Select the "Assist" menu and "Multipump setup".

10. Select the desired multipump function. See sections Alternating operation, Backup operation and Cascade operation.

11. Press [>] to continue.

12. Set the time for pump changeover such as the time at which the alternation between the two pumps is to take place. This step applies only if you have selected "Alternating operation, time" and if the pumps are fitted with FM 300.

13. Press [>] to continue.

14. Select "Radio" as the communication method to be used between the two pumps.

15. Press [>] to continue.

16. Press "Select pump 2".

17. Select the pump from the list. Use the [OK] or button to identify the pump.

18. Press [>] to continue.

19. Confirm the multipump setup by pressing [Send].

20. Press [Finish] in the "Setup complete" dialog box.

21. Wait for the green indicator light in the middle of Grundfos Eye to light up.

The multipump system has now been set.

Grundfos GO and wired pump connection

1. Connect the two pumps with each other with a 3-core screened cable between the GENIbus terminals A, Y, B.
2. Power on both pumps.
3. Establish contact to one of the pumps with Grundfos GO.
4. Set the needed analog and digital inputs via Grundfos GO according to the connected equipment and the required functionality. See section Assisted pump setup.
5. Assign a pump name to the pump using Grundfos GO. See section "Pump name".
6. Assign pump number 1 to the pump. See section "Number" (Pump number).
7. Disconnect Grundfos GO from the pump.
8. Establish contact to the other pump.
9. Set the needed analog and digital inputs via Grundfos GO according to the connected equipment and the required functionality. See section Assisted pump setup.
10. Assign a pump name to the pump using Grundfos GO. See section "Pump name".
11. Assign pump number 2 to the pump. See section "Number" (Pump number).
12. Select the "Assist" menu and choose "Multipump setup".
13. Select the desired multipump function. See sections Alternating operation, Backup operation and Cascade operation.
14. Press [>] to continue.
15. Set the time for pump changeover such as the time at which the alternation between the two pumps is to take place. This step applies only if you have selected "Alternating operation, time" and if the pumps are fitted with FM 300.
16. Press [>] to continue.
17. Select "BUS cable" as the communication method to be used between the two pumps.

18. Press [>] to continue.
 19. Press "Select pump 2".
 20. Select the additional pump from the list. Use the [OK] or button to identify the additional pump.
 21. Press [>] to continue.
 22. Press [Send].
 23. Press [Finish] in the "Setup complete" dialog box.
 24. Wait for the green indicator light in the middle of Grundfos Eye to light up.
- The multipump system has now been set.
- Advanced control panel and wireless pump connection**
1. Power on both pumps.
 2. On both pumps, set the needed analog and digital inputs according to the connected equipment and the required functionality. See section Assisted pump setup.
 3. Select the **Assist** menu on one of the pumps and choose **Setup of multi-pump system**.
 4. Press [>] to continue.
 5. Select "Wireless" as the communication method to be used between the two pumps.
 6. Press [>] to continue.
 7. Select the desired multipump function. See sections Alternating operation, Backup operation and Cascade operation.
 8. Press [>] three times to continue.
 9. Press [OK] to search for other pumps. The green indicator light in the middle of Grundfos Eye flashes on the other pumps.
 10. Press the connect button on the pump which is to be added to the multipump system.
 11. Press [>] to continue.
 12. Set the time for pump changeover i.e. the time at which the alternation between the two pumps is to take place. This step applies only if you have selected "Alternating operation, time" and if the pumps are fitted with FM 300.
 13. Press [>] to continue.
 14. Press [OK]. The multipump function icons appear in the bottom of the control panels.
- The multipump system has now been set.
- Advanced control panel and wired pump connection**
1. Connect the two pumps with each other with a 3-core screened cable between the GENIbus terminals A, Y, B.
 2. Set the needed analog and digital inputs according to the connected equipment and the required functionality. See section Assisted pump setup.
 3. Assign pump number 1 to the first pump. See section "Number" (Pump number).
 4. Assign pump number 2 to the other pump. See section "Number" (Pump number).
 5. Select the **Assist** menu on one of the pumps and choose **Setup of multi-pump system**.
 6. Press [>] to continue.
 7. Select "Wired GENIbus" as the communication method to be used between the two pumps.
 8. Press [>] twice to continue.
 9. Select the desired multipump function. See sections Alternating operation, Backup operation and Cascade operation.
 10. Press [>] to continue.
 11. Press [OK] to search for other pumps.
 12. Select the additional pump from the list.
 13. Press [>] to continue.

14. Set the time for pump changeover i.e. the time at which the alternation between the two pumps is to take place. This step applies only if you have selected "Alternating operation, time" and if the pumps are fitted with FM 300.
15. Press [>] to continue.
16. Press [OK]. The multipump function icons appear in the bottom of the control panels.

The multipump system has now been set.

Disabling the multipump function via Grundfos GO

1. Select the "Assist" menu.
2. Select "Multipump setup".
3. Select "Disable".
4. Press [>] to continue.
5. Confirm the multipump setup by pressing [Send].
6. Press [Finish].

The multipump function has now been disabled.

Disabling a multipump via advanced control panel

1. Select the **Assist** menu.
2. Select **Setup of multi-pump system**.
3. Press [>] to continue.
4. Confirm **No multi-pump function** by pressing [OK].
5. Press [>] to continue.
6. Press [OK].

The multipump system has now been disabled.

This menu gives guidance and corrective actions in case of pump failures.

11. Selection of control mode

System application	Select this control mode
In systems with relatively large pressure losses in the distribution pipes and in air-conditioning and cooling systems.	<p>Two-pipe heating systems with thermostatic valves and the following:</p> <ul style="list-style-type: none"> - very long distribution pipes - strongly throttled balancing valves - differential-pressure regulators - large pressure losses in those parts of the system through which the total quantity of water flows, for example boiler, heat exchanger and distribution pipe up to the first branching. <p>Primary circuit pumps in systems with large pressure losses in the primary circuit.</p> <p>Air-conditioning systems with the following:</p> <ul style="list-style-type: none"> - heat exchangers, fan coils - cooling ceilings - cooling surfaces.
In systems with relatively small pressure losses in the distribution pipes.	<p>Proportional pressure</p>  <p>TM057904</p>
In systems with a fixed system characteristic.	<p>Constant differential pressure</p>  <p>TM057905</p>
Examples:	<p>one-pipe heating systems boiler shunts systems with three-way valves domestic hot-water circulation.</p> <p>Constant temperature and constant differential temperature</p>  <p>TM057906</p>
If an external controller is installed, the pump is able to change from one constant curve to another, depending on the value of the external signal.	<p>Constant curve</p>  <p>TM057907</p>
You can also set the pump to operate according to the maximum or minimum curve, like an uncontrolled pump:	<p>Constant flow rate</p>  <p>TM057908</p>
Examples:	<p>chillers for air-conditioning heating surfaces cooling surfaces.</p> <p>Constant level</p>  <p>TM057909</p>
In systems requiring a constant tank level, independently of the flow rate.	<p>In systems with pumps operating in parallel.</p> <p>The multipump function enables the control of two to four single-head pumps connected in parallel and twin-head pumps without the use of external controllers. The pumps in a multipump system communicate with each other via the wireless GENlair connection or the wired GENI connection.</p> <p>Assist menu</p> <p>Setup of multi-pump system</p>

12. Bus signal

The pump supports serial communication via an RS-485 input. The communication is carried out according to the Grundfos GENibus protocol and enables connection to other pumps as well as a building management system or another external control system.

Via a bus signal, you can remote-set pump operating parameters, such as setpoint and operating mode. At the same time, the pump can, via the bus, provide status information about important parameters, such as actual value of control parameter, input power and fault indications.

Contact Grundfos for further information.

If you use a bus signal, the number of settings available via Grundfos GO are reduced.

13. Priority of settings

You can always set the pump to stop by pressing  on the pump control panel. When the pump is not in **Stop** mode, you can always set the pump to stop by continuously pressing . Furthermore, you can set the pump to maximum speed by continuously pressing . You can always set the pump to operation at maximum speed or to stop with Grundfos GO.

If two or more functions are enabled at the same time, the pump operates according to the function with the highest priority.

Example

If you have set the pump to maximum speed via the digital input, the pump control panel or Grundfos GO can only set the pump to **Manual** or **Stop**.

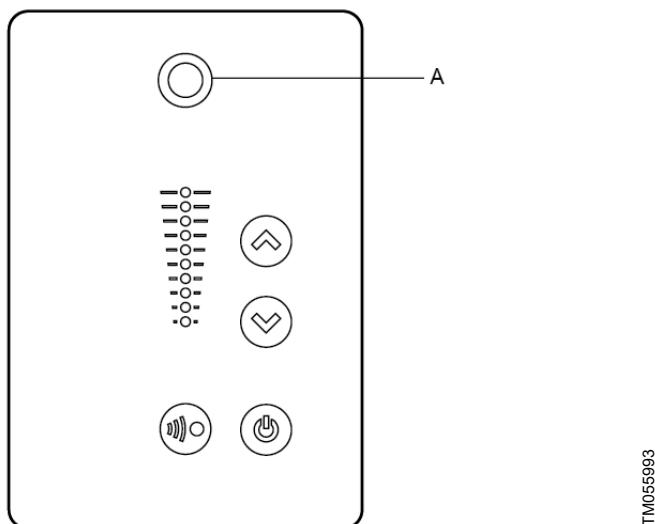

The priority of the settings appears from the table below.

Priority	Start-stop button	Grundfos GO or control panel on pump	Digital input	Bus communication
1	Stop			
2		Stop*		
3		Manual		
4		"Max. speed"*/ "User-defined speed"		
5			Stop	
6			"User-defined speed"	
7				Stop
8				"Max. speed"
9				"Min. speed"
10				"Start"
11			"Max. speed"	
12		"Min. speed"		
13			"Min. speed"	
14			"Start"	
15		"Start"		

**"Stop" and "Max. speed" settings made with Grundfos GO or on the motor control panel can be overruled by another operating-mode command sent from a bus, for example "Start". If the bus communication is interrupted, the motor resumes its previous operating mode, for example "Stop", selected with Grundfos GO or on the motor control panel.

14. Grundfos Eye

The operating condition of the pump is indicated by the Grundfos Eye on the control panel.

Grundfos Eye

Grundfos Eye	Indication	Description
	No lights are on.	The power is off. The pump is not running.
	The two opposite green indicator lights are rotating in the direction of rotation of the pump when seen from the non-drive end.	The power is on. The pump is running.
	The two opposite green indicator lights are permanently on.	The power is on. The pump is not running.
	One yellow indicator light is rotating in the direction of rotation of the pump when seen from the non-drive end.	Warning. The pump is running.
	One yellow indicator light is permanently on.	Warning. The pump has stopped.
	The two opposite red indicator lights flash simultaneously.	Alarm. The pump has stopped.
	The green indicator light in the middle flashes quickly four times. 	This is a feedback signal which the pump gives in order to ensure identification of itself.
	The green indicator light in the middle flashes continuously. 	Grundfos GO or another pump is trying to communicate with the pump. Press on the pump control panel to allow communication.
	The green indicator light in the middle is permanently on. 	Remote control with Grundfos GO via radio. The pump is communicating with Grundfos GO via radio connection.
	The green indicator light in the middle flashes quickly while Grundfos Go is exchanging data with the pump. It takes a few seconds. 	Remote control with Grundfos GO via infrared light. The pump is receiving data from Grundfos GO via infrared communication.

15. Signal relays

The pump has two outputs for potential-free signals via two internal relays.

You can set the signal outputs to **Operation**, **Pump running**,

Ready, **Alarm** and **Warning**.

The functions of the two signal relays appear from the table below.

Description	Grundfos Eye	Contact position of signal relays when activated					Operating mode
		Operation	Running	Ready	Alarm	Warning	
The power is off.							-
The pump runs in "Normal" mode.							"Normal", "Min." or "Max."
The pump runs in "Manual" mode.							"Manual"
The pump is in operating mode "Stop".							"Stop"
Warning, but the pump is running.							"Normal", "Min." or "Max."
Warning, but the pump runs in "Manual" mode.							"Manual"
Warning, but the pump was stopped via a "Stop" command.							"Stop"
Alarm, but the pump is running.							"Normal", "Min." or "Max."
Alarm, but the pump runs in "Manual" mode.							"Manual"
The pump has stopped due to an alarm.							"Stop"

16. Installing a communication interface module

DANGER

Electric shock

Death or serious personal injury

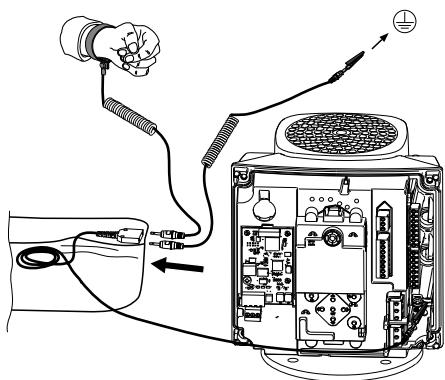

- Switch off the power supply to the motor and to the signal relays. Wait at least 5 minutes before starting any work on the motor. Make sure that the power supply cannot be accidentally switched on.

Always use an antistatic service kit when handling electronic components. This prevents static electricity from damaging the components.

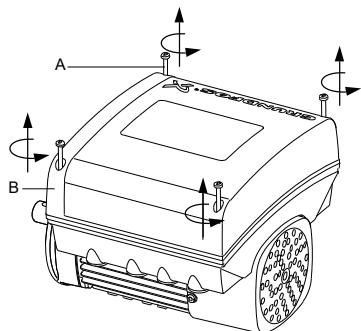

When unprotected, place the component on the antistatic cloth.

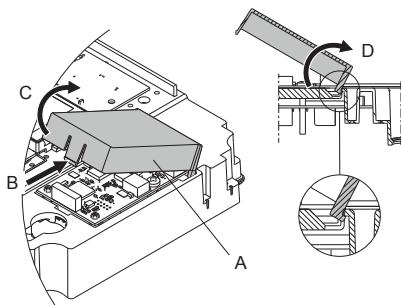

Antistatic service kit

1. Loosen the four screws (A) and remove the terminal box cover (B).

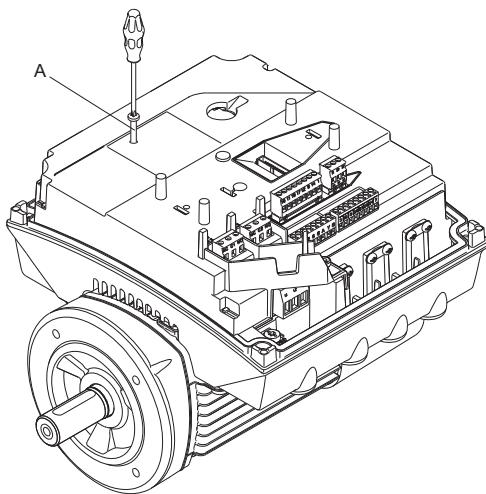

Removing the terminal box cover

2. Remove the CIM cover (A) by pressing the locking tab (B) and lifting the end of the cover (C). Then lift the cover off the hooks (D).

Removing the CIM cover

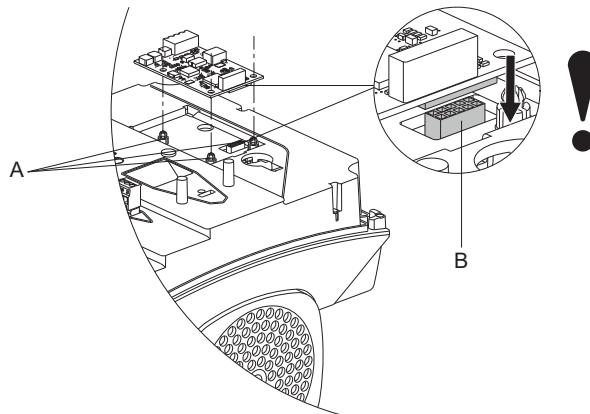

3. Remove the securing screw (A).

TM064082

Removing the securing screw

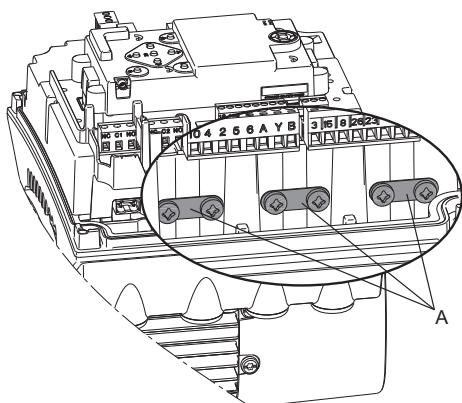

4. Fit the CIM module by aligning it with the three plastic holders (A) and the connecting plug (B). Press home the module using your fingers.

TM064083

Fitting the CIM module

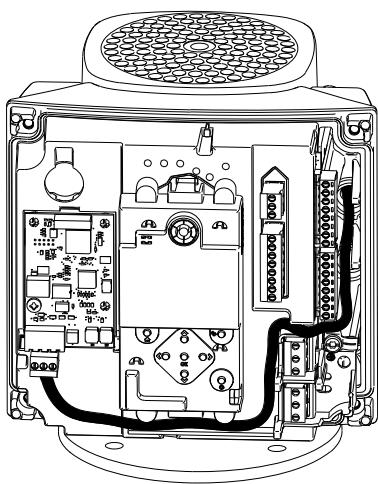

5. Fit and tighten the securing screw (fig. Removing the securing screw, A) to 1.3 Nm.
6. Make the electrical connections to the CIM module as described in the instructions delivered with the module.
7. Connect the cable screens of the bus cables to ground (earth) via one of the ground (earth) clamps (A).

TM064195

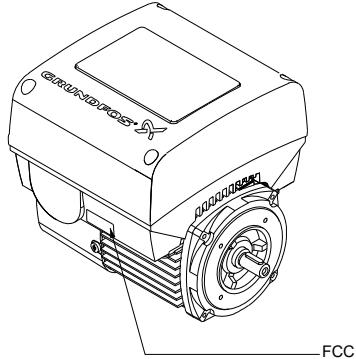

Connecting the cable screens to ground (earth)

8. Route the wires for the CIM module. See the example in the figure below.

Example of wire routing

9. Fit the CIM cover.
10. If the CIM module is supplied with an FCC label, then place this on the terminal box. See the figure below.

FCC label

11. Fit the terminal box cover (fig. Removing the terminal box cover, B) and cross-tighten the four mounting screws (fig. Removing the terminal box cover, A) to 6 Nm.

Make sure that the terminal box cover is aligned with the control panel. See section Changing the position of the control panel.

18. Identification of control panel

You can identify the fitted module in one of the following ways:

Grundfos GO

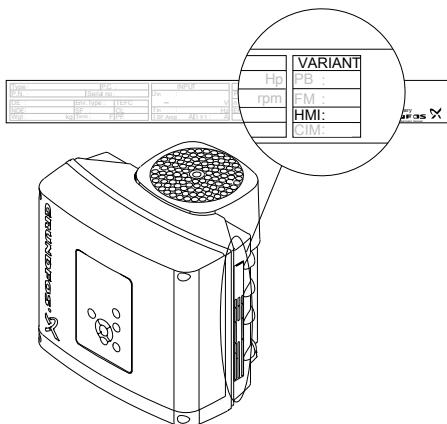

You can identify the control panel in the "Fitted modules" menu under "Status".

Pump display

For pumps fitted with the advanced control panel, you can identify the control panel in the **Fitted modules** menu under **Status**.

Motor nameplate

You can identify the fitted control panel on the motor nameplate.

Identification of control panel

Variant	Description
HMI 200	Standard control panel
HMI 300	Advanced control panel

19. Changing the position of the control panel

DANGER

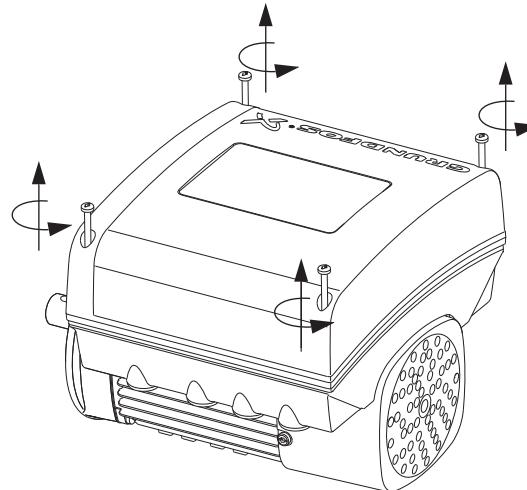

Electric shock

Death or serious personal injury

- Switch off the power supply to the motor and to the signal relays. Wait at least 5 minutes before starting any work on the motor. Make sure that the power supply cannot be accidentally switched on.

You can turn the control panel 180 °. Follow the instructions below.

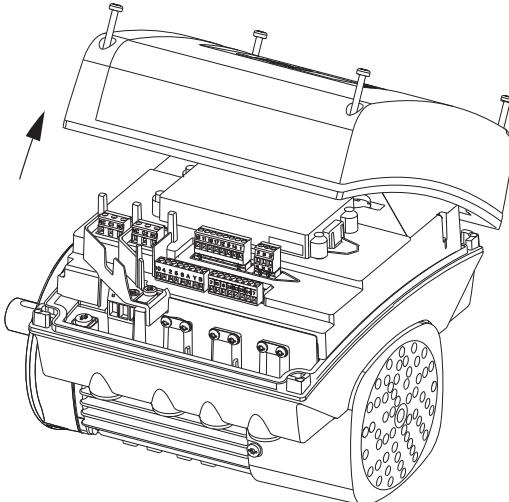

1. Loosen the four screws, TX25, of the terminal box cover.

TM055351

Loosening the screws

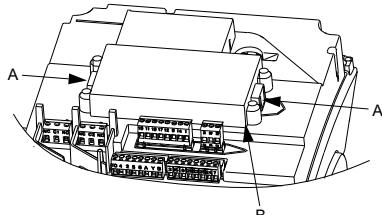

2. Remove the terminal box cover.

TM055352

Removing the terminal box cover

3. Press and hold in the two locking tabs, A, while gently lifting the plastic cover, B.

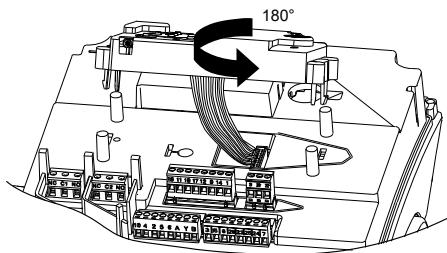

TM055353

Lifting the plastic cover

4. Turn the plastic cover 180 °.

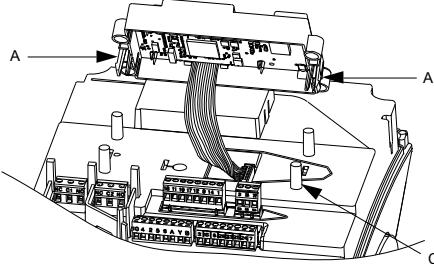

Do not twist the cable more than 90 °.

Turning the plastic cover

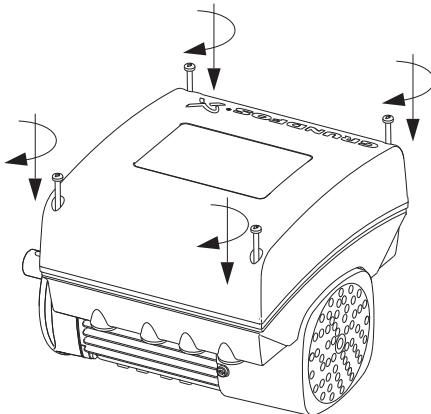

- Position the plastic cover correctly on the four rubber pins, C. Make sure that the locking tabs, A are placed correctly.

TM055354

Positioning the plastic cover

- Fit the terminal box cover, and make sure that it is also turned 180 ° so that the buttons on the control panel are aligned with the buttons on the plastic cover.
- Tighten the four screws, TX25, with 5 Nm.

TM055355

Fitting the terminal box cover

20. Servicing the product

DANGER

Electric shock

Death or serious personal injury

- Switch off the power supply to the motor and the signal relays. Wait at least 5 minutes before starting any work on the motor. Make sure that the power supply cannot be switched on accidentally.

DANGER

Magnetic field

Death or serious personal injury

- Do not handle the motor or rotor if you have a pacemaker.

20.1 Motor

If service is needed on the product, contact Grundfos Service.

20.2 Pump

Service documentation is available in Grundfos Product Center (<http://product-selection.grundfos.com/>).

If you have any questions, contact the nearest Grundfos company or service workshop.

21. Cleaning the product

WARNING

Electric shock

Death or serious personal injury

- Switch off the power supply to the motor and the signal relays. Confirm that the terminal box cover is intact before spraying water on the product.

To avoid condensation in the motor, let the motor cool down before spraying it with cold water.

22. Megging

Megging of an installation incorporating MGЕ motors is not allowed, as the built-in electronics may be damaged.

23. Technical data, single-phase motors

23.1 Supply voltage

- 1 x 200-230 V - 10 %/+ 10 %, 50/60 Hz, PE.

Check that the supply voltage and frequency correspond to the values stated on the nameplate.

Recommended fuse size

Motor size [HP]	Motor size [kW]	Min. [A]	Max. [A]
0.16 - 1.00	0.12 - 0.75	6	10
1.5 - 2.0	1.1 - 1.5	10	16

You can use standard as well as quick-blow or slow-blow fuses.

23.2 Leakage current

Earth leakage current must be less than 3.5 mA, AC.

Earth leakage current must be less than 10 mA, DC.

The leakage currents are measured in accordance with EN 61800-5-1:2007.

24. Technical data, three-phase motors

24.1 Supply voltage

Check that the supply voltage and frequency correspond to the values stated on the nameplate.

Recommended fuse size

- 3 x 380-500 V - 10 %/+ 10 %, 50/60 Hz, PE.

Motor size [HP]	Motor size [kW]	Minimum [A]	Maximum [A]
0.33 - 1.5	0.25 - 1.1	6	6
2.0	1.5	6	10
3.0	2.2	6	16
4.0	3	10	16
5.0	4	13	16
7.5	5.5	16	32
10	7.5	20	32
15	11	32	32

- 3 x 200-240 V - 10 %/+ 10 %, 50/60 Hz, PE.

Motor size [HP]	Motor size [kW]	Minimum [A]	Maximum [A]
1.5	1.1	10	20
2.0	1.5	10	20
3.0	2.2	13	35
4.0	3	16	35
5.0	4	25	35
7.5	5.5	32	35

You can use standard as well as quick-blow or slow-blow fuses.

24.2 Leakage current, AC

Speed [min ⁻¹]	Power [HP]	Power [kW]	Mains voltage [V]	Leakage current [mA]
1400-2000	0.33 - 2.0	0.25 - 1.5	≤ 400	< 3.5
			> 400	< 5
1450-2200	3.0 - 5.0	2.2 - 4	≤ 400	< 3.5
			> 400	< 5
2900-4000	7.5 - 10	5.5 - 7.5	≤ 400	< 3.5
			> 400	< 5
4000-5900	0.33 - 3.0	0.25 - 2.2	≤ 400	< 3.5
			> 400	< 5
4000-5900	4.0 - 7.5	3 - 5.5	≤ 400	< 3.5
			> 400	< 5
4000-5900	10.0 - 15.0	7.5 - 11	≤ 400	< 3.5
			> 400	< 5
4000-5900	0.33 - 3.0	0.25 - 2.2	≤ 400	< 3.5
			> 400	< 5
4000-5900	4.0 - 7.5	3 - 5.5	≤ 400	< 3.5
			> 400	< 5
4000-5900	10.0 - 15.0	7.5 - 11	≤ 400	< 3.5
			> 400	< 5

The leakage currents are measured without any load on the shaft and in accordance with EN 61800-5-1:2007.

25. Inputs and outputs

Ground reference, GND

All voltages refer to GND.

All currents return to GND.

Absolute maximum voltage and current limits

Exceeding the following electrical limits may result in severely reduced operating reliability and motor life:

Relay 1:

Maximum contact load: 250 VAC, 2 A or 30 VDC, 2 A.

Relay 2:

Maximum contact load: 30 VDC, 2 A.

GEN1 terminals: -5.5 to 9.0 VDC or less than 25 mADC.

Other input and output terminals: -0.5 to 26 VDC or less than 15 mADC.

Digital inputs, DI

Internal pull-up current greater than 10 mA at V_i equal to 0 VDC.

Internal pull-up to 5 VDC; currentless for V_i greater than 5 VDC).

Low logic level: V_i less than 1.5 VDC.

High logic level: V_i greater than 3.0 VDC.

Hysteresis: No.

Screened cable: 0.5 - 1.5 mm², 2 8-16 AWG.

Maximum cable length: 1640 ft (500 m).

Open-collector digital outputs, OC

Current sinking capability: 75 mADC, no current sourcing.

Load types: Resistive or/and inductive.

Low-state output voltage at 75 mADC: Maximum 1.2 VDC.

Low-state output voltage at 10 mADC: Maximum 0.6 VDC.

Overcurrent protection: Yes.

Screened cable: 0.5 - 1.5 mm², 2 8-16 AWG.

Maximum cable length: 1640 ft (500 m).

Analog inputs, AI

Voltage signal ranges:

- 0.5 - 3.5 VDC, AL AU.
- 0-5 VDC, AU.
- 0-10 VDC, AU.

Voltage signal: R_i greater than 100 kΩ at 77 °F (25 °C).

Leak currents may occur at high operating temperatures. Keep the source impedance low.

Current signal ranges:

- 0-20 mADC, AU.
- 4-20 mADC, AL AU.

Current signal: R_i equal to 292 Ω.

Current overload protection: Yes. Change to voltage signal.

Measurement tolerance: - 0/+ 3 % of full scale (maximum-point coverage).

Screened cable: 0.5 - 1.5 mm², 2 8-16 AWG.

Maximum cable length: 1640 ft (500 m), excl. potentiometer.

Potentiometer connected to +5 V, GND, any AI:

Use maximum 10 kΩ.

Maximum cable length: 100 m.

Analog output, AO

Current sourcing capability only.

Voltage signal:

- Range: 0-10 VDC.
- Minimum load between AO and GND: 1 kΩ.
- Short-circuit protection: Yes.

Current signal:

- Ranges: 0-20 and 4-20 mADC.
- Maximum load between AO and GND: 500 Ω.
- Open-circuit protection: Yes.

Tolerance: - 0/+ 4 % of full scale (maximum-point coverage).

Screened cable: 0.5 - 1.5 mm², 2 8 -16 AWG.

Maximum cable length: 1640 ft (500 m).

Pt100/1000 inputs, PT

Temperature range:

- Minimum -22 °F (-30 °C). 88 Ω/882 Ω.
- Maximum 356 °F (180 °C). 168 Ω/1685 Ω.

Measurement tolerance: ± 2.7 °F (1.5 °C).

Measurement resolution: < 0.54 °F (0.3 °C).

Automatic range detection, Pt100 or Pt1000: Yes.

Sensor fault alarm: Yes.

Screened cable: 0.5 - 1.5 mm², 2 8-16 AWG.

Use Pt100 for short wires.

Use Pt1000 for long wires.

LiqTec sensor inputs *

Use Grundfos LiqTec sensor only.

Screened cable: 0.5 - 1.5 mm², 2 8-16 AWG.

Grundfos Digital Sensor input and output, GDS *

Use Grundfos Digital Sensor only.

* Not applicable for TPE, TPED pumps. The factory-fitted differential-pressure sensor for TPE, TPED Series 2000 is connected to this input.

Power supplies

+5 V:

- Output voltage: 5 VDC - 5 %/+ 5 %.
- Maximum current: 50 mADC, sourcing only.
- Overload protection: Yes.

+24 V:

- Output voltage: 24 VDC - 5 %/+ 5 %.
- Maximum current: 60 mADC, sourcing only.
- Overload protection: Yes.

Digital outputs, relays

Potential-free changeover contacts.

Minimum contact load when in use: 5 VDC, 10 mA.

Screened cable: 0.5 - 2.5 mm², 2 8-12 AWG.

Maximum cable length: 1640 ft (500 m).

Bus input

Grundfos GENIbus protocol, RS-485.

Screened 3-core cable: 0.5 - 1.5 mm², 2 8-16 AWG.

Maximum cable length: 1640 ft (500 m).

26. Other technical data

EMC (electromagnetic compatibility)

Standard used: EN 61800-3.

The table below shows the emission category of the motor.

C1 fulfils the requirements for residential areas.

Note: When connected to a public network, 11 kW motors do not comply with the partial weighted harmonic distortion (PWHD) requirements of EN 61000-3-12. If required by the distribution network operator, compliance can be obtained in the following way:

The impedance of the mains cables between the motor and the point of common coupling (PCC) must be equivalent to the impedance of a 164 ft (50 m) cable with a cross-section of 0.5 mm.
C3 fulfils the requirements for industrial areas.

Note: When the motors are installed in residential areas, supplementary measures may be required as the motors may cause radio interference.

		Emission category		
Motor [HP]	Motor [kW]	1450-2000 min ⁻¹	2900-4000 min ⁻¹	4000-5900 min ⁻¹
0.33	0.25	C1	C1	
0.50	0.37	C1	C1	
0.75	0.55	C1	C1	
1.0	0.75	C1	C1	
1.5	1.1	C1	C1	
2.0	1.5	C1	C1	
3.0	2.2	C1	C1	
4.0	3	C1	C1	
5.0	4	C1	C1	
7.5	5.5	C3/C1*	C1	
10.0	7.5	C3/C1*	C3/C1*	
15.0	11	-	C3/C1*	

* C1, if equipped with an external Grundfos EMC filter.

Immunity: The motor fulfils the requirements for industrial areas.

Contact Grundfos for further information.

Enclosure class

Standard: IP55 (IEC 34-5).

Optional: IP66 (IEC 34-5).

Insulation class

F (IEC 85).

Standby power consumption

5-10 W.

Cable entries

Motor [HP]	Motor [kW]	Number and size of cable entries		
		1400-2000 1450-2200 [min ⁻¹]	2900-4000 [min ⁻¹]	4000-5900 [min ⁻¹]
0.33 - 2.0	0.25 - 1.5	4xM20	4xM20	4xM20
3.0	2.2	1xM25 + 4xM20	4xM20	4xM20
4.0 - 5.0	3.0 - 4.0	1xM25 + 4xM20	1xM25 + 4xM20	1xM25 + 4xM20
7.5	5.5	1xM32 + 5xM20	1xM25 + 4xM20	1xM25 + 4xM20
10 - 15	7.5 - 11	1xM32 + 5xM20	1xM32 + 5xM20	1xM32 + 5xM20

28. Disposing of the product

This product or parts of it must be disposed of in an environmentally sound way:

1. Use the public or private waste collection service.
2. If this is not possible, contact the nearest Grundfos company or service workshop.

Installation in the USA and Canada

1. Installation in the USA and Canada

In order to maintain the cURus approval, follow these additional installation instructions. The UL approval is according to UL 1004-1.

Outdoor installation

According to UL 778/C22.2 No 108-14, pumps intended for outdoor use must be marked enclosure type 3 and the product must be tested at a surface temperature down to -31 °F (-35 °C). The MLE enclosure is approved for type 3 or 4 and is rated at a surface temperature down to 32 °F (0 °C), thus it is only for indoor use in UL 778/C22.2 No 108-14 pump applications.

For more information about ambient temperature during operation, see section Ambient temperature during operation.

Canadian Interference-Causing Equipment Standard

This product complies with the Canadian ICES-003 Class B specifications. This Class B device meets all the requirements of the Canadian interference-causing equipment regulations.

1.1. Electrical codes

For USA

This product complies with the Canadian Electrical Code and the US National Electrical Code.

This product has been tested according to the national standards for Electronically Protected Motors:

- CSA 22.2 100-14: 2014 (applies to Canada only).
- UL 1004-1: 2015 (applies to USA only).

Pour le Canada

Codes de l'électricité

Ce produit est conforme au Code canadien de l'électricité et au Code national de l'électricité américain.

Ce produit a été testé selon les normes nationales s'appliquant aux moteurs protégés électroniquement:

CSA 22.2 100.04: 2009 (s'applique au Canada uniquement).

UL 1004-1: Juin 2011 (s'applique aux États-Unis uniquement).

1.2. Radio communication

For USA

This device complies with part 15 of the FCC rules and RSS210 of IC rules.

Operation is subject to the following two conditions:

- This device may not cause interference.
- This device must accept any interference, including interference that may cause undesired operation of the device.

Users are cautioned that changes or modifications not expressly approved by Grundfos could void the user's authority to operate the equipment.

Pour le Canada

Communication radio

Ce dispositif est conforme à la partie 15 des règles de la FCC et aux normes RSS210 de l'IC.

Son fonctionnement est soumis aux deux conditions suivantes:

- Ce dispositif ne doit pas provoquer de brouillage préjudiciable.
- Il doit accepter tout brouillage reçu, y compris le brouillage pouvant entraîner un mauvais fonctionnement.

1.3. Identification numbers

For USA

Grundfos Holding A/S
Contains FCC ID: OG3-RADIOM01-2G4.

For Canada

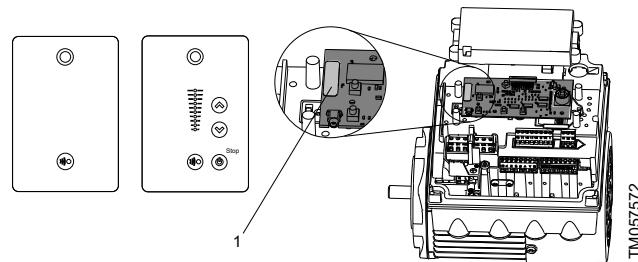

Grundfos Holding A/S
Model: RADIOMODULE 2G4
Contains IC: 10447A-RA2G4M01.

Pour le Canada

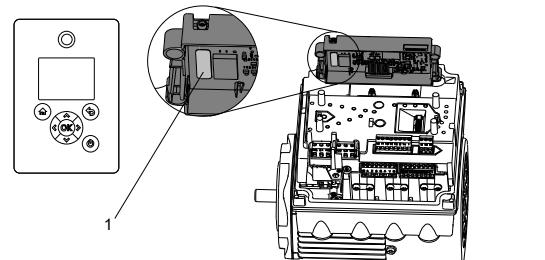

Numéros d'identification

Grundfos Holding A/S
Modèle: RADIOMODULE 2G4
Contient IC: 10447A-RA2G4M01.

Location of identification numbers

Identification numbers (1)

Identification numbers (1)

1.4. Electrical connection

1.4.1. Conductors

Use 140/167 °F (60/75 °C) copper conductors only.

1.4.2. Torques

Maximum tightening torques for the terminals can be found in the section on torques.

Related information

[26.1 Torques](#)

1.4.3. Line reactors

Maximum line reactor size must not exceed 1.5 mH.

1.4.4. Fuse size/circuit breaker

If a short-circuit occurs, the pump can be used on a mains supply delivering not more than 5000 RMS symmetrical amperes, 600 V maximum.

Motor size [HP (kW)]	Fuse size	Circuit breaker type/model
0.5 to 3.0 (0.25 to 2.2 kW)	25 A	25 A / inverse time

Fuses

When the motor is protected by fuses, they must be rated for 480 V. Maximum sizes are stated in the table above.

Motors up to and including 3.00 HP (2.20 kW) require class K5 UR fuses.

Circuit breaker

When the pump is protected by a circuit breaker, this must be rated for a maximum voltage of 480 V. The circuit breaker must be of the "inverse time" type.

The interrupting rating (RMS symmetrical amperes) must not be less than the values stated in the table above.

1.4.5. Overload protection

Degree of overload protection provided internally by the drive, in percent of full-load current: 102 %.

1.5. Outdoor installation

According to UL 778/C22.2 No 108-14 pumps that are intended for outdoor use shall be marked enclosure type 3 and the product shall be tested with rated surface temperature down to -31 °F

(-35 °C). The MLE enclosure is approved for type 3 or 4 and rated surface temperature down to 32 °F (0 °C), thus only for indoor use in UL 778/C22.2 No 108-14 pump applications. For ambient temperature during operation, see the section on ambient temperature.

Related information

Installation aux États-Unis et au Canada

1. Installation aux États-Unis et au Canada

Afin de respecter la norme UL cURus, suivre ces instructions d'installation supplémentaires. La norme UL est conforme à UL 1004-1.

Installation extérieure

Selon la norme UL 778/C22.2 No 108-14, les pompes destinées à un usage extérieur doivent être marquées Boîtier de type 3 et le produit doit être testé avec une température de surface allant jusqu'à -35 °C (-31 °F). Le boîtier MLE est homologué pour le type 3 ou 4 et sa température nominale de surface jusqu'à 0 °C (32 °F), donc uniquement pour une utilisation en intérieur des applications de pompe UL 778/C22.2 No 108-14.

Pour plus d'informations sur la température ambiante pendant le fonctionnement, voir section Température ambiante pendant le fonctionnement.

Norme canadienne sur les appareils causant des interférences.

Ce produit est conforme aux spécifications de la norme canadienne ICES-003 classe B. cet appareil de classe B répond à toutes les exigences de la réglementation canadienne sur les appareils causant des interférences.

1.1. Codes électriques

Pour les États-Unis

Ce produit est conforme au Code canadien de l'électricité et au Code national de l'électricité des États-Unis.

Ce produit a été testé selon les normes nationales pour les moteurs protégés électroniquement :

- CSA 22.2 100-14 : 2014 (s'applique uniquement pour le Canada).
- UL 1004-1 : 2015 (s'applique uniquement pour les États-Unis).

1.4. Branchement électrique

1.4.1. Conducteurs

Utiliser uniquement des conducteurs en cuivre, 60/75 °C (140/167 °F).

1.4.2. Couples de serrage

Les couples de serrage maximaux pour les bornes sont indiqués dans la section Couples.

1.4.3. Réacteurs conduite

La taille maximale du réacteur de conduite ne doit pas dépasser 1,5 mH.

1.4.4. Dimension fusible/disjoncteur

Si un court-circuit se produit, la pompe peut être utilisée avec une alimentation électrique ne fournissant pas plus de 5 000 RMS ampères symétriques, 600 V max.

Puissance moteur [HP (kW)]	Taille de fusible	Type/modèle de disjoncteur
0,5 à 3,0 (0,25 à 2,2 kW)	25 A	25 A / à temporisation inverse

Fusibles

Lorsque le moteur est protégé par des fusibles, ils doivent supporter 480 V. Les tailles maximales sont indiquées dans le tableau ci-dessus.

Les moteurs jusqu'à 3,00 HP (2,20 kW) nécessitent des fusibles de classe UR K5.

Disjoncteur

Lorsque la pompe est protégée par un disjoncteur, celui-ci doit pouvoir supporter une tension maximale de 480 V. Le disjoncteur doit être de type Temporisation inverse.

La valeur d'interruption assignée (ampères symétriques RMS) ne doit pas être inférieure aux valeurs indiquées dans le tableau ci-dessus.

1.4.5. Protection contre la surcharge

Degré de protection contre les surcharges fournies en interne par l'entraînement, en pourcentage de l'intensité à pleine charge : 102%.

1.5. Installation extérieure

Conformément à la norme UL 778/C22.2 n° 108-14, les pompes destinées à être utilisées à l'extérieur doivent être marquées d'un boîtier de type 3 et le produit doit être testé à une température de surface nominale allant jusqu'à -31 °F

(-35 °C). Le boîtier MLE est homologué pour le type 3 ou 4 et une température de surface nominale allant jusqu'à 32 °F (0 °C), donc uniquement pour une utilisation à l'intérieur dans les applications de pompes UL 778/C22.2 No 108-14. Pour la température ambiante pendant le fonctionnement, voir la section Température ambiante.

Limited consumer warranty

1. Limited consumer warranty

This Limited Warranty is provided for Consumer Products sold in the United States only and applies to Consumer Transactions as defined in and applicable under the Magnusson-Moss Warranty Act and any other applicable Federal and/or State laws. In case of non-Consumer Products, please refer to Grundfos' warranty terms defined in clause 10 of Grundfos US Terms and Conditions of Sale of Product and Services available at <https://www.grundfos.com/legal/grundfos-customer-terms/usa-grundfos-general-terms-for-sales-of-products-and-services>

This Limited Warranty gives you specific legal rights, and you may also have other rights which vary from State to State.

New products manufactured by Grundfos are warranted to the original purchaser only and are to be free from defects in design, material and workmanship under normal use and service for no greater than a period of thirty (30) months from the date of manufacture which is set forth on the product's nameplate and on the product's packaging or the minimum period required by the applicable State law. For New Jersey, the applicable period is one year from the date of purchase.

The warranty period for replacement products, parts and components expires thirty (30) months from the original date of manufacture of the product originally purchased, unless a longer period is required under the applicable State law. For New Jersey, the warranty period for replacement products, parts and components expires one year from the original date of purchase of the product, not the date of replacement. Products sold by Grundfos that are manufactured by others are not covered by this warranty.

Note that when purchasing a Grundfos product online, it is important to check the date of manufacture and the duration of the warranty with the seller as the product might no longer be covered under this Limited Warranty.

When a product is subject to this Limited Warranty a purchaser should contact the seller from which it purchased the product to make a claim.

If the seller of a product is no longer in business, the purchaser should contact a Grundfos Authorized Service Partner, which can be found at www.grundfos.com/us under > Support > Contact Service.

As part of making a claim, a purchaser shall return a defective product at the purchaser's cost, to the extent allowed by applicable law, along with proof of purchase and an explanation of the defect, date the defect occurred and circumstances surrounding the defect. For New Jersey there is no prohibition on returning a defective product at a purchaser's cost. If Grundfos is required by applicable State law to pay for the cost of shipment under applicable State law, then a purchaser should contact a Grundfos Authorized Service Partner to arrange for shipment. A purchaser also needs to promptly respond to Grundfos as to any inquiries regarding a warranty claim.

Grundfos' liability under this Limited Warranty to purchaser is limited to the repair or replacement of a product (at Grundfos' decision) that is the sole and exclusive remedy for purchaser to the extent permissible by applicable law. For New Jersey this limitation is permissible.

This warranty does not cover the following: ordinary wear and tear; use of a product for applications for which it is not intended; use of a product in an unsuitable environment; modifications, alterations or repair undertaken by anyone not acting with Grundfos' written authorization; failure to follow Grundfos' instructions, operations manuals, any other guidelines or good industry practice; use of faulty or inadequate ancillary equipment in combination with a product; application of spare or replacement parts not provided or authorized by Grundfos; accidental or intentional damage or misuse of a product.

The time period for making a claim under the implied warranty of merchantability and implied warranty of fitness are limited to the same time period as provided by this warranty to the extent permissible by applicable law. For residents of New Jersey, this limitation is permissible, but note that some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

Grundfos shall not be liable for any incidental and consequential damages in connection with a product to the extent permissible by applicable law. For residents of New Jersey, this limitation is permissible, but note that some states do not allow limitations of incidental or consequential damages, so the above limitation may not apply to you.

2. Garantía limitada del consumidor

Esta garantía limitada se proporciona únicamente para los productos de consumo vendidos en los Estados Unidos y es aplicable a las transacciones de consumo tal y como se define en y resulta aplicable en virtud de la ley de Garantías Magnusson-Moss y cualquier otra legislación federal y/o estatal aplicable. Para el caso de productos que no sean de consumo, consulte los términos de la garantía de Grundfos definidos en la cláusula 10 de los términos y condiciones de venta de productos y servicios de Grundfos para los EE. UU., disponibles en <https://www.grundfos.com/legal/grundfos-customer-terms/usa-grundfos-general-terms-for-sales-of-products-and-services>.

Esta garantía limitada le confiere derechos legales específicos. Puede que también tenga otros derechos en virtud de su jurisdicción estatal.

Se garantiza únicamente al comprador original que los productos fabricados por Grundfos estarán libres de defectos de diseño, materiales y mano de obra en condiciones normales de uso y servicio durante un periodo no mayor a treinta (30) meses a partir de la fecha de fabricación que figura en la placa de datos del producto y en el empaque del mismo o el periodo mínimo exigido por la legislación estatal aplicable. Para Nueva Jersey, el periodo aplicable es de un año a partir de la fecha de compra.

El periodo de garantía para los productos, partes y componentes de repuesto vence a los treinta (30) meses contados a partir de la fecha de fabricación original del producto adquirido en primer lugar, a menos que la legislación estatal aplicable exija un periodo más largo. Para Nueva Jersey, el periodo de garantía de los productos, partes y componentes de repuesto vence un año contado a partir de la fecha original de compra del producto, no de la fecha de sustitución.

Los productos vendidos por Grundfos que sean producidos por otros fabricantes no están cubiertos por esta garantía.

Tenga en cuenta que, al comprar un producto Grundfos en línea, es importante revisar la fecha de fabricación y la duración de la garantía con el vendedor, ya que es posible que el producto ya no esté cubierto por esta garantía limitada.

Cuando un producto esté sujeto a esta garantía limitada, el comprador deberá ponerse en contacto con el vendedor al que haya comprado el producto para presentar una reclamación.

Si el vendedor de un producto ya no está en el negocio, el comprador debe ponerse en contacto con socio de servicio autorizado por Grundfos, que puede encontrar en la dirección www.grundfos.com/us, en la sección "Support" > "Contact Service".

Como parte de la presentación de una reclamación, el comprador deberá devolver el producto descompuesto a su costa, en la medida en la que lo permita la legislación aplicable, junto con el comprobante de compra y una explicación del defecto, la fecha en que este se haya producido y las circunstancias en torno al defecto. En Nueva Jersey no existe ninguna prohibición de devolver un producto descompuesto a costa del comprador. Si la legislación estatal aplicable obliga a Grundfos a hacerse cargo de los gastos de envío, el comprador deberá ponerse en contacto con un servicio técnico autorizado por Grundfos para organizar el envío. El comprador también debe responder con prontitud a Grundfos cualquier consulta relacionada con una reclamación de garantía.

La responsabilidad de Grundfos hacia el comprador en virtud de esta garantía limitada se limita a la reparación o sustitución de un producto (a decisión de Grundfos), que es el único y exclusivo remedio para el comprador en la medida permitida por la legislación aplicable. Para Nueva Jersey, esta limitación resulta permisible.

Esta garantía no cubre lo siguiente: el desgaste ordinario; el uso de un producto para aplicaciones para las que no está diseñado; el uso de un producto en un entorno inadecuado; las modificaciones, alteraciones o reparaciones realizadas por cualquier persona que no actúe con la autorización por escrito de Grundfos; el incumplimiento de las instrucciones, manuales de operación, cualquier otro lineamiento o las buenas prácticas industriales de Grundfos; el uso de equipos auxiliares descompuestos o inadecuados en combinación con un producto; el uso de repuestos o partes de sustitución no proporcionados ni autorizados por Grundfos; el daño accidental o deliberado o el uso indebido de un producto.

El periodo para presentar una reclamación en virtud de la garantía implícita de comerciabilidad y la garantía implícita de idoneidad se limita al mismo periodo previsto por esta garantía en la medida permitida por la legislación aplicable. Para los residentes de Nueva Jersey, esta limitación resulta permisible, si bien se debe tener en cuenta que algunos estados no permiten limitaciones en cuanto a la duración de una garantía implícita, por lo que la limitación anterior puede no resultar aplicable en su caso.

Grundfos no será responsable de ningún daño indirecto o consecuente en relación con un producto en la medida en la que lo permite la legislación aplicable. Para los residentes de Nueva Jersey, esta limitación resulta permisible, si bien debe tenerse en cuenta que algunos estados no permiten limitaciones en cuanto a daños indirectos o consecuentes, por lo que la limitación anterior puede no resultar aplicable en su caso.

Limited manufacturer's warranty

1. Limited manufacturer's warranty

This Limited Manufacturer's Warranty outlines applicable coverage and claims procedures for the pumps manufactured by Grundfos (the "Product").

This Limited Manufacturer's Warranty is provided for consumer products sold and used in Canada only and applies to consumer transactions as defined in the applicable provincial and territorial laws. In case of non-consumer products, please refer to Grundfos' warranty terms defined in clause 10 of Grundfos Canada Terms and Conditions of Sale of Product and Services available at: <https://www.grundfos.com/ca/legal/general-terms-and-conditions-of-sales-and-delivery>

This Limited Manufacturer's Warranty provides specific rights and limitations. Some of the limitations may not apply to you, and you may also have other rights that vary from province to province.

Scope of the Limited Manufacturer's Warranty

Subject to the following warranty terms and conditions, Grundfos Canada Inc. of 2941 Brighton Rd, Oakville, ON L6H 6C9, Canada ("Grundfos"), warrants to the original consumer (the "Purchaser") that the new Product manufactured by Grundfos is free from defects in design, material and workmanship under normal use and service for a period of twenty-four (24) months from the date of retail purchase but no greater than a period of thirty (30) months from the date of manufacture which is set forth on the Product's nameplate and on the Product's packaging (the "Warranty Period").

Note that when purchasing a Grundfos Product online, it is important to check the date of manufacture and the duration of the warranty with the seller as the Product might no longer be covered under this Limited Manufacturer's Warranty.

This Limited Manufacturer's Warranty applies exclusively to a new Grundfos Product sold and used in Canada. This Limited Manufacturer's Warranty does not apply to any Product sold "as is" or "sales final". This Limited Manufacturer's Warranty is not transferrable by the original Purchaser. Products sold by Grundfos that are manufactured by others are not covered by this warranty.

The sole and exclusive remedy under this Limited Manufacturer's Warranty is the repair or, at the discretion of Grundfos, the replacement of the Product, as set out below. Defects or damages are not covered by the Limited Manufacturer's Warranty if they are due to:

- ordinary wear and tear;
- use of the Product for an application for which it is not intended;
- installation of the Product in an environment not suitable for the Product;
- any modification, alteration or repair of the Product undertaken by the Purchaser or a third party (not acting on Grundfos' behalf);
- failure to follow Grundfos' instructions, including in the installation manual, operation manual, maintenance manual or service manual;
- installation, commissioning, operation (including the use of the Product or any Grundfos product outside its specifications) or maintenance of the Product other than in accordance with Grundfos installation manual, operation manual, maintenance manual or service manual or with good industry practice;
- use of faulty or inadequate ancillary equipment in combination with the Product;
- the application of spare parts of poor quality (excluding the application of any Grundfos original spare parts);
- accidental or intentional damage or misuse of the Products or services by the Purchaser or a third party (not acting on Grundfos' behalf); or
- the non-compliance of the Purchaser or of the Purchaser's own products with applicable law and regulation.

How to get service under the Limited Manufacturer's Warranty:

When a Product is subject to this Limited Manufacturer's Warranty, the Purchaser should contact the seller from which it purchased the Product to make a claim within 24 months from the date of retail purchase but no later than thirty (30) months from the date of manufacture which is set forth on the Product's nameplate and on the Product's packaging (the "Warranty Notification Period").

If the seller of a Product is no longer in business, the Purchaser should contact Grundfos Service at www.grundfos.com/us under **Support > Contact Service**.

To exercise the rights under this Limited Manufacturer's Warranty, the Purchaser shall return a defective Product at the Purchaser's cost, to the extent allowed by applicable law, along with proof of purchase and an explanation of the defect, date the defect occurred and circumstances surrounding the defect.

The Purchaser is responsible for any expenses for dismounting and mounting the Product and for any and costs related to removal, reinstallation, transportation, and insurance. If Grundfos is required by applicable provincial or territorial law to pay for the cost of transportation, then the Purchaser should contact Grundfos Service Partner to arrange for shipment. The Purchaser also needs to promptly respond to Grundfos as to any inquiries regarding a warranty claim.

Unless requested by Grundfos, the Product may not be disassembled prior to remedy. Any failure to comply herewith will render this Limited Manufacturer's Warranty void.

Grundfos will either arrange the repair of the defective Product under this Limited Manufacturer's Warranty or, at Grundfos' option, provide the Purchaser with a replacement of the defective Product. The replacement unit can be new or remanufactured.

To the extent permissible by applicable law, Grundfos shall not be liable for any incidental and consequential damages or losses of any kind whatsoever arising under, relating to or in connection with the Product, use of the Product or the inability to use the Product.

2. Garantie limitée du fabricant

Cette garantie limitée du fabricant décrit la couverture applicable et les procédures de réclamation pour les pompes fabriquées par Grundfos (ci-après le « Produit »).

Cette garantie limitée du fabricant est fournie pour les produits de consommation vendus et utilisés au Canada uniquement et s'applique aux transactions de consommateurs telles que définies dans les lois provinciales et territoriales applicables. Dans le cas de produits non destinés aux consommateurs, se référer aux conditions de garantie de Grundfos définies à l'article 10 des Conditions générales de vente des produits et services de Grundfos Canada, qui sont disponibles à l'adresse suivante : <https://www.grundfos.com/ca/fr/legal/general-terms-and-conditions-of-sales-and-delivery>

Cette garantie limitée du fabricant prévoit des droits et des limitations spécifiques. Certaines des limitations peuvent ne pas s'appliquer à vous, et vous pouvez également bénéficier d'autres droits qui varient d'une province à l'autre.

Champ d'application de la garantie limitée du fabricant

Sous réserve des conditions générales de garantie suivantes, Grundfos Canada Inc., dont le siège social est situé au 2941, Brighton Rd, Oakville, ON L6H 6C9, Canada (ci-après « Grundfos »), garantit au consommateur initial (ci-après « l'Acheteur ») que le nouveau Produit fabriqué par Grundfos est exempt de défauts de conception, de matériaux et de fabrication dans des conditions normales d'utilisation et d'entretien pendant une période de vingt-quatre (24) mois à compter de la date d'achat au détail, mais pas plus de trente (30) mois à compter de la date de fabrication indiquée sur la plaque signalétique et sur l'emballage du Produit (« Période de garantie »).

Lors de l'achat d'un Produit Grundfos en ligne, il est important de vérifier la date de fabrication et la durée de la garantie auprès du vendeur, car le Produit pourrait ne plus être couvert par cette garantie limitée du fabricant.

Cette garantie limitée du fabricant s'applique exclusivement à un Produit Grundfos neuf vendu et utilisé au Canada. Cette garantie limitée du fabricant ne s'applique pas aux Produits vendus « en l'état » ou « vente finale ». La présente garantie limitée du fabricant n'est pas transférable par l'Acheteur initial. Les produits vendus par Grundfos qui sont fabriqués par des tiers ne sont pas couverts par cette garantie.

Le seul et unique recours dans le cadre de cette garantie limitée du fabricant est la réparation ou, à la discréTION de Grundfos, le remplacement du Produit, comme indiqué ci-dessous. Les défauts ou dommages ne sont pas couverts par la garantie limitée du fabricant s'ils sont dus à :

- l'usure normale ;
- l'utilisation du Produit pour une application pour laquelle il n'est pas prévu ;
- l'installation du Produit dans un environnement non adapté au Produit ;
- toute modification, altération ou réparation du Produit entreprise par l'Acheteur ou un tiers (n'agissant pas pour le compte de Grundfos) ;
- la non-observation des instructions de Grundfos, y compris dans les notices d'installation, d'utilisation, de maintenance ou d'entretien ;
- l'installation, la mise en service, l'utilisation (y compris l'utilisation du Produit ou de tout produit Grundfos en dehors de ses spécifications) ou l'entretien du Produit autrement que conformément aux notices d'installation, d'utilisation, de maintenance ou d'entretien Grundfos ou aux bonnes pratiques de l'industrie ;
- l'utilisation d'un équipement auxiliaire défectueux ou inadéquat en combinaison avec le Produit ;
- l'utilisation de pièces de rechange de mauvaise qualité (à l'exclusion de l'utilisation de pièces de rechange d'origine Grundfos) ;
- tout dommage accidentel ou intentionnel ou toute mauvaise utilisation des Produits ou des services par l'Acheteur ou un tiers (n'agissant pas pour le compte de Grundfos) ; ou
- la non-conformité de l'Acheteur ou de ses propres produits aux lois et règlements applicables.

Procédure à suivre pour bénéficier d'un service dans le cadre de la garantie limitée du fabricant :

Lorsqu'un Produit est soumis à la présente garantie limitée du fabricant, l'Acheteur doit contacter le vendeur auprès duquel il a acheté le produit pour faire une réclamation dans les 24 mois suivant la date d'achat au détail, mais au plus tard trente (30) mois à compter de la date de fabrication indiquée sur la plaque signalétique du Produit et sur l'emballage du Produit (« Période de notification de garantie »).

Si le vendeur d'un Produit n'est plus en activité, l'Acheteur doit contacter le service Grundfos à l'adresse www.grundfos.com/us sous **Support > Contact Service**.

Pour exercer les droits prévus par la présente garantie limitée du fabricant, l'Acheteur doit renvoyer le Produit défectueux à ses frais, dans la mesure où la loi applicable le permet, accompagné de la preuve d'achat et d'une explication du défaut, de la date à laquelle le défaut s'est produit et des circonstances entourant le défaut.

L'Acheteur est responsable de tous les frais de démontage et de montage du Produit et de tous les frais liés à l'enlèvement, à la réinstallation, au transport et à l'assurance. Si Grundfos est tenu par la loi provinciale ou territoriale applicable de payer les frais de transport, l'Acheteur doit contacter le partenaire de service Grundfos pour organiser l'expédition. L'Acheteur doit également répondre rapidement à Grundfos pour toute demande concernant une réclamation au titre de la garantie.

Sauf demande de Grundfos, le Produit ne doit pas être démonté avant d'être remis en état. Tout manquement à ces dispositions entraînera l'annulation de la présente garantie limitée du fabricant.

Grundfos procédera à la réparation du Produit défectueux dans le cadre de cette garantie limitée du fabricant ou, à la convenance de Grundfos, fournira à l'Acheteur un produit de remplacement du Produit défectueux. L'unité de remplacement peut être neuve ou refabriquée.

Dans la mesure autorisée par la loi applicable, Grundfos ne sera pas responsable des dommages accessoires et indirects ou des pertes de quelque nature que ce soit découlant de, liés à ou en rapport avec le Produit, l'utilisation du Produit ou l'incapacité d'utiliser le Produit.
