### INDUSTRY LEADING FEATURES / BENEFITS

#### A PERFECT BALANCE BETWEEN BUDGET LIMITS, ENERGY SAVINGS AND COMFORT

The **D5FSAA** series air handler unit ductless systems are a matched combination of an outdoor condensing unit and an indoor fan coil unit connected only by refrigerant tubing and wires.

This selection of fan coils permits creative solutions to design problems such as:

- Add-ons to current space (an office or family room addition)
- Special space requirements
- When changes in the load cannot be handled by the existing system
- Historical renovations or any application where preserving the look of the original structure is essential.

These compact indoor fan coil units take up very little space above the ceiling. Advanced system components incorporate innovative technology to provide reliable cooling performance at low sound levels.

#### LOW SOUND LEVELS

When noise is a concern, the ductless systems are the answer. The indoor units are whisper quiet. There are no compressors indoors, either in the conditioned space or directly over it, and there is none of the noise usually generated by air being forced through ductwork.

#### SECURE OPERATION

If security is an issue, outdoor and indoor units are connected only by refrigerant piping and wiring to prevent intruders from crawling through the ductwork. In addition, since outdoor units can be installed close to an outside wall, coils are protected from vandals and severe weather.

#### FAST INSTALLATION

This compact ductless system is simple to install. A mounting bracket and duct work is needed for the indoor units, and only wire and piping need run between the indoor and outdoor units. These units are fast and easy to install ensuring minimal disruption to customers in the home or workplace. This makes the air handler systems the equipment of choice, especially in retrofit situations.

On all indoor units, service and maintenance expense is reduced due to easy accessible service panels. In addition, these air handler systems have extensive self-diagnostics to assist in troubleshooting.

#### BUILT-IN RELIABILITY

The air handler ductless system indoor and outdoor units are designed to provide years of trouble-free operation.

The air handler indoor units include protection against freeze-up and high evaporator temperatures on heat pumps.

The condensing units on the heat pumps are protected by a three minute delay that provides over-current protection and high temperature protection prior to the start of the compressor.

## ECONOMICAL OPERATION

The air handler ductless system design allows individual or multi-room heating or cooling when required. There is no need to run large supply-air fans or chilled water pumps to handle a few spaces with unique load patterns.

## LEAK MITIGATION

The unit is equipped with a refrigerant leak detection sensor.

## EASY-TO-USE CONTROLS

The air handler units have microprocessor-based controls to provide the ultimate in comfort and efficiency. The user-friendly control provides the interface between the user and the unit.

## MULTI-POISE INSTALLATION

Designed for maximum installation flexibility. The secondary drain built-in allows the unit to be mounted in an upflow, downflow, left or right installation depending on existing conditions.

## 24V INTERFACE

The built-in 24V Interface allows users to control the ductless system with a third party heat pump thermostat.

## AGENCY LISTINGS

All systems are listed with AHRI (Air Conditioning, Heating & Refrigeration Institute), UL/ETL and CSA.

## FULL MULTI-POSITION INSTALLATION

This Air Handler is capable of upflow, downflow horizontal left, or horizontal right configurations.

## INSTALLATION CONVENIENCE

It simplifies the airflow volume adjustment process and saves lots of installation efforts. The traditional adjustment method needs the installers to manually set the motor speed according to the installation instruction and ducting design.

## EASY FAULT CODE CHECKING

- Thanks to advanced mutual data communication technology, the Air Handler system can intelligently self-detect the failure cause and generate a corresponding code.
- The installer or user can easily check the fault code displayed on the electric function board by opening the lid.
- It helps you proactively determine the failure cause, prepare for repairing parts ahead of field maintenance work, and greatly improve work efficiency.

## AUTOMATIC AIR FLOW ADJUSTMENT

During the operation, when the dust filter or evaporator is clogged with dust, the load of the system and motor torque increases. The microprocessor on the unit can detect this change and adjust the fan speed to keep the CFM stable.

## SAFETY FEATURES

### Indoor fan delayed operation

- When the unit starts, the indoor fan will operate after a period of setting time.

- If the unit is in heating mode, the indoor fan is regulated by the anti-cold wind function.

### Sensor redundancy and automatic shutoff

- If one temperature sensor malfunctions, the air conditioner continues operation and displays the corresponding error code, allowing for emergency use.
- When more than one temperature sensor is malfunctioning, the air conditioner ceases operation.

## BASIC FUNCTIONS

### Abbreviations

Table 1 – Unit Element Abbreviations

Abbreviation	Element
T1	Indoor room temperature
T2	Coil temperature of evaporator
T3	Coil temperature of condenser
T4	Outdoor ambient temperature
TP	Compressor discharge temperature
TS	Setting temperature
Tsc	Adjusted setting temperature

In this manual, abbreviations such as CDIFTEMP, HDIFTEMP2, TEH2, TCE1, and TCE2 are well-setting parameter of EEPROM.

### Fan Mode

When fan mode is activated:

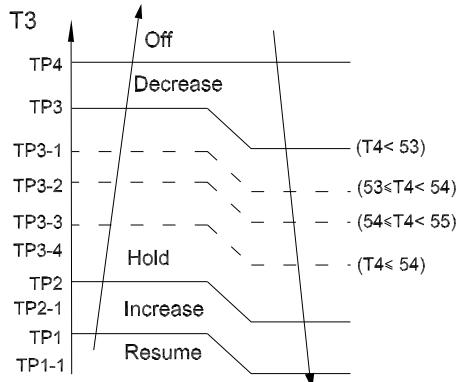

- Temperature control is disabled and no temperature setting is displayed.
- The indoor fan speed can be set to low, medium, high, turbo, and auto when operating with the wired controller or wireless remote.
- Auto fan: In fan-only mode, AC operates the same as auto fan in cooling mode with the temperature set at 75°F (24°C).
- Under 24V control, when only G signal is available, when switching from heating mode or emergency heating mode to fan mode,  $T4 < 50^{\circ}\text{F}$ (10°C), the heating mode is sent to the outdoor; when  $T4 > 53.6^{\circ}\text{F}$ (12°C), the normal outdoor control is resumed, the fan mode is sent to the outdoor.

### Cooling Mode

#### Indoor Fan Control

- In cooling mode, the indoor fan operates continuously. The fan speed can be set to low, medium, high, turbo and auto.
- Auto fan action in cooling mode:
  - Descent curve
    - When  $T1 - Tsc$  is lower than  $6.3^{\circ}\text{F}/3.5^{\circ}\text{C}$ , fan speed reduces to high;
    - When  $T1 - Tsc$  is lower than  $1.8^{\circ}\text{F}/1^{\circ}\text{C}$ , fan speed reduces to medium;
    - When  $T1 - Tsc$  is lower than  $0.9^{\circ}\text{F}/0.5^{\circ}\text{C}$ , fan speed reduces to low;
  - Rise curve
    - When  $T1 - Tsc$  is higher than or equal to  $1.8^{\circ}\text{F}/1^{\circ}\text{C}$ , fan speed increases to medium;
    - When  $T1 - Tsc$  is higher than or equal to  $2.7^{\circ}\text{F}/1.5^{\circ}\text{C}$ , fan speed increases to high;
    - When  $T1 - Tsc$  is higher than or equal to  $7.2^{\circ}\text{F}/4^{\circ}\text{C}$ , fan speed increases to turbo.

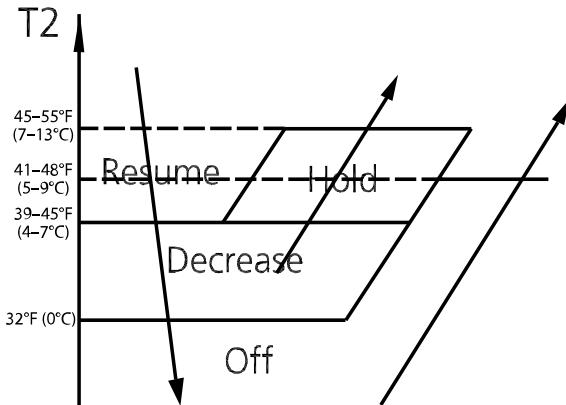

### Condenser Temperature Protection

**Fig. 2 – Condenser Temperature Protection**

- Off: Compressor stops.
- Decrease: Decrease running frequency to the lower level at 0.04Hz/s.
- Hold: Keep the current frequency.
- Increase: Increase the running frequency to the higher level at 1Hz/s.
- Resume: No limitation for frequency.

### Evaporator Temperature Protection

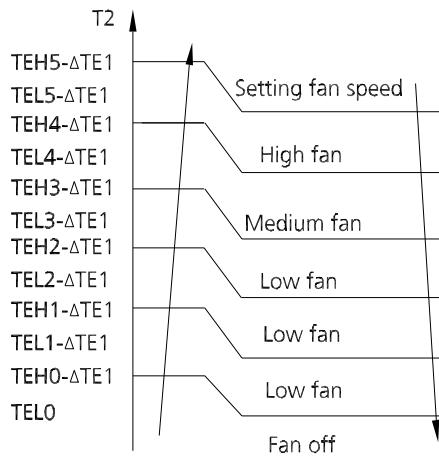

**Fig. 3 – Evaporator Temperature Protection**

- Off: Compressor stops.
- Decrease: Decrease the running frequency to the lower level per 1 minute.
- Hold: Keep the current frequency.
- Resume: No limitation for frequency.

### Heating Mode (Heat Pump Units)

#### **Indoor Fan Control**

- In heating mode, the indoor fan operates continuously. The fan speed can be set to low, medium, high, turbo, and auto.
  - Anti-cold air function
    - The indoor fan is controlled by the indoor temperature T1 and indoor unit coil temperature T2.

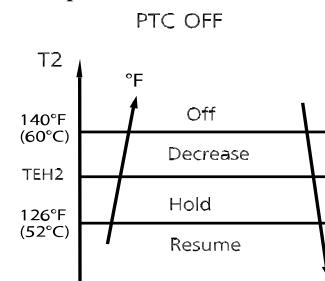

**Fig. 4 – Indoor Fan Control**

#### 2. Auto fan action in heating mode:

- Rise curve
  - When  $T1 - Tsc$  is higher than  $-2.7°F/-1.5°C$ , fan speed reduces to high;
  - When  $T1 - Tsc$  is higher than  $0°F/0°C$ , fan speed reduces to medium;
  - When  $T1 - Tsc$  is higher than  $0.9°F/0.5°C$ , fan speed reduces to low;
- Descent curve
  - When  $T1 - Tsc$  is lower than or equal to  $0°F/0°C$ , fan speed increases to medium;
  - When  $T1 - Tsc$  is lower than or equal to  $-2.7°F/-1.5°C$ , fan speed increases to high;
  - When  $T1 - Tsc$  is lower than or equal to  $-5.4°F/-3°C$ , fan speed increases to turbo.

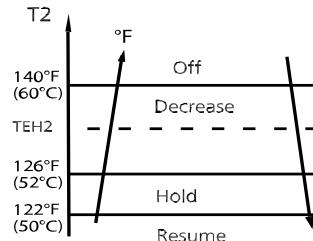

**NOTE: The unit is equipped with a refrigerant leak detection sensor.**

#### **Evaporator Coil Temperature Protection**

PTC OFF

PTC ON

**Fig. 5 – Evaporator Coil Temperature Protection**

- Off: Compressor stops
- Decrease: Decrease the running frequency to the lower level per 20 seconds
- Hold: Keep the current frequency
- Resume: No limitation for frequency

### Auto Mode

- This mode can be selected with the remote controller and the temperature setting can be adjusted between 61°F~86°F (16°C~30°C).
- In auto mode, the machine selects cooling, heating, or fan-only mode on the basis of  $\Delta T$  ( $\Delta T = T1 - TS$ ).

**Table 2 — Auto Mode**

$\Delta T$	Running mode
$\Delta T > 3.6^{\circ}\text{F}(2^{\circ}\text{C})$	Cooling
$-5.4^{\circ}\text{F}(-3^{\circ}\text{C}) < \Delta T \leq 2^{\circ}\text{C}(3.6^{\circ}\text{F})$	Fan-Only
$\Delta T \leq -5.4^{\circ}\text{F}(3^{\circ}\text{C})$	Heating*

Heating\*: In auto mode, cooling only models run the fan

- Indoor fan will run at auto fan speed.
- If the machine switches mode between heating and cooling, the compressor will keep stopping for certain time and then choose mode according to  $\Delta T$ .

### Drying Mode "(Available with wireless remote or wired controller)

- In drying mode, AC operates the same as auto fan in cooling mode.
- All protections are activated and operate the same as they do that in cooling mode.
- Low Room Temperature Protection

If the room temperature is lower than 50°F/10°C, the compressor ceases operations and does not resume until room temperature exceeds 53.6°F/12°C.

### Forced Operation Function

Press the AUTO/COOL button, the AC will run as below sequence:

#### **Forced cooling mode:**

The compressor and outdoor fan continue to run and the indoor fan runs at breeze speed. After running for 30 minutes, the AC will switch to auto mode with a preset temperature of 76°F(24°C).

## **DISPLAY FUNCTION**

**NOTE:**

The W terminal should only be used with a conventional thermostat.

1=24V signal

0=No 24V signal

\*=1 or 0

**Matching With Multi Zone Outdoor Unit**

When matching with multi zone outdoor unit, the indoor unit cannot be started due to the mode conflict in the following cases.

**Table 4 – Matching with Multi-Zone Outdoor Unit**

MODE OF AHU	MODE OF OTHER IDU ZONES	MODE CONFLICT UNIT
Fan	Heating/ Electric heat/ Emergency heat	45MBAA
Cooling		45MBAA
Dehumidification		45MBAA
Heating	Fan/Cooling/Dehumidification	Other IDU Zones
Electric Heat		Other IDU Zones
Emergency Heat		Other IDU Zones

**NOTES:**

- When Heating reaches the temperature and shuts down with other IDU zones heating normally, the 45MBAA fan will stop running, and the Fan-ON mode is invalid.
- For multi-zone connections, the heat pump will start synchronously when Emergency heat or Electric heat is started.
- When two AHU units are connected by multi zone outdoor unit, the above rules are applicable while one of the 45MBAA unit regarded as other IDU zones.

## MODEL NUMBER NOMENCLATURE

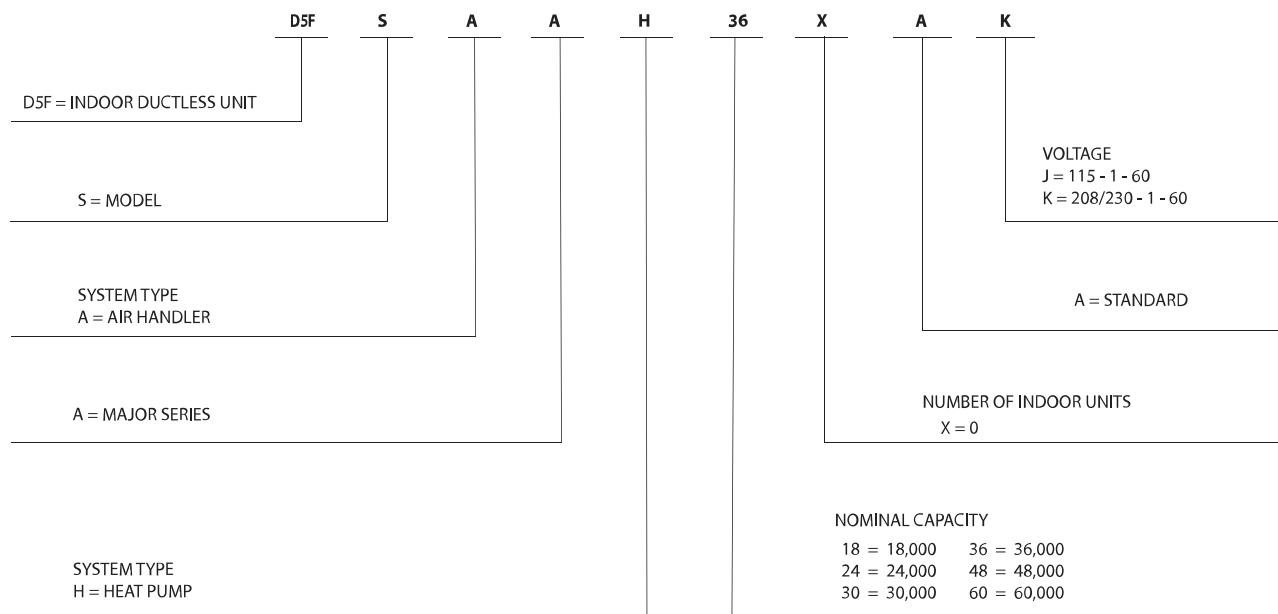

Fig. 6 – Model Number Nomenclature

A220909

Use of the AHRI Certified TM Mark indicates a manufacturer's participation in the program. For verification of certification for individual products, go to [www.ahridirectory.org](http://www.ahridirectory.org).

A220910

## ACCESSORIES

The unit comes equipped with the following accessories. Use all of the installation parts and accessories to install the unit. Improper installation may result in water leakage, electrical shock and fire, or equipment failure.

Table 5 — Accessories

NAME	SHAPE	QUANTITY
Manual		3
Remote Controller		1
Battery		2

**NOTE: See the current compatibility charts for a list of the indoor unit and outdoor unit match ups.**

## APPLICATION DATA

### UNIT SELECTION

Select equipment to either match or that can handle slightly less than the anticipated peak load. This provides better humidity control, fewer unit cycles, and less part-load operation.

For units used in spaces with high sensible loads, base equipment selection on unit sensible load, not on a total anticipated load. Adjust for anticipated room wet bulb temperature to avoid undersizing equipment.

### UNIT MOUNTING (INDOOR)

Refer to the unit's installation instructions for further details.

**Unit leveling** - For reliable operation, units should be level in all planes.

**Clearance** - Provide adequate clearance for airflow (see Fig. 12 – on page 9).

**Unit location** - Select a location that provides the best air circulation for the space.

Do not install the indoor or outdoor units in a location with special environmental conditions. For those applications, contact your ductless representative.

### SUPPORT

Adequate support must be provided to support the weight of all fan coils. Refer to Table 7 for fan coil weights. Refer to "DIMENSIONS" on page 8 for the base unit dimensional drawings which contain the location of the mounting brackets.

**Table 9 — System Operating Conditions**

OPERATING RANGE MIN/MAX °F (°C)		
	Cooling	Heating
Indoor DB	63 / 90 (17 / 32)	32 / 86 (0 / 30)
Indoor WB	59 / 84 (15 / 29)	

**NOTE:** Reference the unit's installation instructions for more information.

### DRAIN CONNECTIONS

Install the drains in compliance with the local sanitation codes.

## WIRING

Size all wires per the NEC (National Electrical Code) or CEC (Canadian Electrical Code) and local codes. Use the electrical data from the outdoor unit (MCA - minimum circuit amps and MOCP - maximum over current protection), to correctly size the wires and the disconnect fuse or breakers respectively.

### SIZE 18 - 36K (NON-LIGHT COMMERCIAL MODELS) RECOMMENDED CONNECTION METHOD FOR POWER AND COMMUNICATION WIRING

**Power and Communication Wiring:** The main power is supplied to the outdoor unit. The field supplied 14/3 power/communication wiring, from the outdoor unit to the indoor unit, consists of four (4) wires and provides the power for the indoor unit. Two wires are high voltage AC power, one is communication wiring and the other is a ground wire.

**To minimize communication interference:** If installed in a high Electromagnetic field (EMF) area and communication issues arise, a 14/2 stranded shielded cable can be used to replace L(2) and (S) between the outdoor and indoor units - landing the shield onto the ground in the outdoor unit only.

**Table 10 — Wiring Size 18-36**

CABLE	CABLE SIZE	REMARKS
Connection Cable	14AWG	3 wire + Ground 1Φ 208/230 V (Stranded wire is recommended)

### SIZES 36-60K (LIGHT COMMERCIAL MODELS)

### RECOMMENDED CONNECTION METHOD FOR POWER AND COMMUNICATION WIRING

**Power and Communication Wiring:** The main power is supplied to the outdoor unit. The field supplied power wiring from the outdoor unit to the indoor unit consists of three (3) wires and provides the power for the indoor unit. Two wires are high voltage AC power and one is a ground wire. To minimize voltage drop, the factory recommended wire size is 14/2 power stranded with a ground.

**Communication Wiring:** A separate 2-wire cable (stranded, shielded, copper conductor), with a 600 volt rating and double insulated copper wire, must be used as the communication wire from the outdoor unit to the indoor unit. Use a separate shielded 16AWG stranded control wire.

**Table 11 — Wiring Size 36-60**

CABLE	CABLE SIZE	REMARKS
Power Connection Cable	14AWG	2 wire + Ground 1Φ 208/230 V
Communication Cable	16AWG	2 wire stranded shielded control wire

**NOTE:** The main power is supplied to the outdoor unit. When disconnecting the power to the outdoor unit, the indoor unit loses power. A disconnect switch may be required for the indoor unit (check local codes). A 3 pole disconnect may be used for extra protection between the indoor and outdoor unit. Separate power is required for an Auxiliary Electric Heater.

## CAUTION

### EQUIPMENT DAMAGE HAZARD

Comply with local codes while running wire from the indoor unit to the outdoor unit. Every wire must be connected firmly. Loose wiring may cause the terminal to overheat or result in a unit malfunction. A fire hazard may also exist. Ensure all wiring is tightly connected.

No wire should touch the refrigerant tubing, compressor or any moving parts. Disconnecting means must be provided and located within sight and readily accessible from the system. Route the connecting cable with conduit through the hole in the conduit panel.

## CONTROL SYSTEM

The indoor unit is equipped with a microprocessor control to perform two functions:

1. Provide safety for the system
2. Control the system and provide optimum levels of comfort and efficiency.

The main microprocessor is located on the control board of the fan coil unit (outdoor units have a microprocessor also) with thermistors located in the fan coil air inlet and on the indoor coil. Heat pump units have a thermistor on the outdoor coil. These thermistors monitor the system's operation to keep the unit within acceptable parameters and control the operating mode.

## WIRELESS REMOTE CONTROLLER

A wireless remote controller is supplied.

Fig. 14 – Wireless Remote Controller

A220917

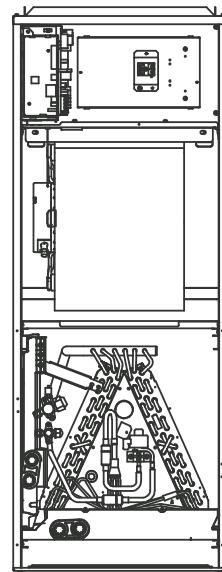

Fig. 16 – Air Handler

A220916

## WIRED REMOTE CONTROLLER

Fig. 15 – Wired Remote Controller

A220918

A wired remote controller is supplied. The wired controller will also control the auxiliary heat (if installed) as either a supplementary or an emergency heating source.

**NOTE: The AAQ utilizes a constant air volume ECM motor that automatically adjusts to increases in static pressure to maintain 0.80" ESP. Therefore, there is no need to set airflow using either of the supplied remotes.**

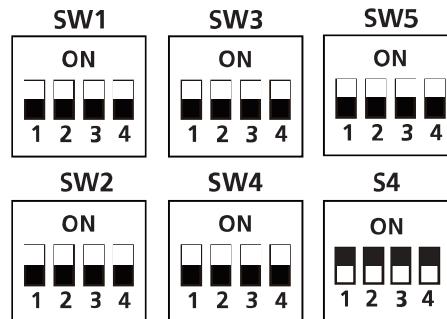

## 24 VOLT INTERFACE

The indoor unit comes equipped with a 24V interface that provides further flexibility, functionality and control allowing it to be controlled by any 3rd party single-stage heat pump thermostat (field supplied).

**NOTE: If a third party thermostat is preferred, a heat pump thermostat must be utilized.**

### Function DIP Switch Settings

The 24V thermostat mode needs to refer to the following settings:

SW1

SW2

SW3

SW4

SW5

S4

000 is the default 000/001/010/011/100/101/110/111  
internal machines with different abilities, electric  
heating and PSC classification for use.

Table 12 – Function Combination Table of SW1-1 and SW1-4

SW1	Control Type	IDU and ODU Connection	Note
	Wired Controller / 24V Thermostat	S1 + S2	Auto Discovery
	Wired Controller	S1 + S2	Scenario 2
	24V Thermostat	S1 + S2	Scenario 1
	24V Thermostat	24V Thermostat	This setting not applicable.

Table 13 – Indoor Unit Dial Code

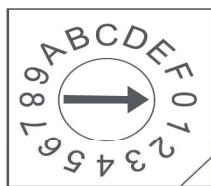

No.	Dial Code	Control Scenario	Function	ON	OFF	Note
1	SW1-2	1,2,3	Anti-cold blow protection option	NO	[Default] YES	
2	SW1-3	1,2,3	Single cooling / heating and cooling options	Cooling	[Default] Cooling & Heating	
3	SW2-1	1	Compressor Running (demand working with heat pump+ Electric heat)	Compressor slower speed	[Default] Faster Compressor	Only affects compressor and W1
4	SW2-1	2	Temperature differential to activate first stage auxiliary heat (the GAP of Tl and Ts), wire controller demand with heat pump + electric heat working together	2°F (1°C)	[Default] 4°F (2°C)	
5	SW2-2	2	Electric heat on delay	YES	[Default] NO	
6	SW2-3	2	Electric auxiliary heating delay to start time	30 minutes	[Default] 15 minutes	Based on SW2-2 is ON
7	SW2-4	1	Compressor	The operation of heat pump is limited by the outdoor temperature, and the operation of auxiliary heat is not limited.The system makes judgments according to the following rules: 1) The compressor can be operated when the outdoor temperature is >S3 DIP switch temperature +2 °C. 2) The compressor cannot be operated when the outdoor temperature is lower than the S3 DIP switch temperature.	[Default] The operation of heat pump is limited by the outdoor temperature, and the operation of auxiliary heat is not limited. The system makes judgments based on the following rules: 1) The compressor cannot be operated when the outdoor temperature is lower than the S3 DIP switch. 2) The compressor can be operated when the outdoor temperature is >S3 DIP switch temperature +2 °C.	SW2-4 and S3 need to work together
8	SW2-4	2	Compressor/ Auxiliary heat outdoor ambient lockout	The operation of heat pump is limited by the outdoor temperature, and the operation of auxiliary heat is not limited.The system makes judgments according to the following rules: 1) The compressor can be operated when the outdoor temperature is >S3 DIP switch temperature +2 °C. 2) The compressor cannot be operated when the outdoor temperature is lower than the S3 DIP switch temperature.	[Default] Only one heat pump or auxiliary heat can be operated. The system makes judgments according to the following rules: 1) When the outdoor temperature is lower than the S3 DIP switch temperature, the compressor is not allowed to operate, but auxiliary heat is allowed to operate. 2) When the outdoor temperature is >S3 DIP switch temperature +2°C, the compressor can be operated, but auxiliary heat cannot be operated.	
9	Rotary Sw S3	1,2	Set outdoor temperature Limitation (for auxiliary heating or compressor)	Table A		
10	SW3-1	1	Maximum continuous runtime allowed before system automatically stages up capacity to satisfy set point. This adds 1 to 5°F to the user set point in the calculated control point to increase capacity and satisfy user set point	30 minutes	[Default] 90 minutes	
11	SW3-2	1	Cooling and heating Y/Y2 temperature differential adjustment.	Compressor slower speed	[Default] Faster compressor	Only affects compressor.
12	SW3-3	1	Compressor Running (demand working with heat pump+ Electric heat)	Compressor slower speed	[Default] Faster compressor	Only affects compressor and W2.
13	SW3-3	2	Temperature differential to activate second stage auxiliary heating (the GAP of Tl and Ts) Wire controller demand with heat pump + Electric heat working together	4°F (2°C)	[Default] 6°F (3°C)	
14	SW3-4	1,3	Fan speed of cooling mode when 24V thermostat is applied for.	Turbo	High	
15	SW4-1 SW4-2 SW4-3	1,2,3	Electric heat nominal CFM adjustment	Available settings are 000/001/010/011. Each digit corresponds an individual switch position. For example [SW4-1 OFF, SW4-2 ON, SW4 -3 OFF] = 010		
16	SW4-4	2	Temperature differential to activate third stage auxiliary heating (the GAP of Tl and Ts) Wire controller demand with heat pump + Electric heat working together.	6°F (3°C)	[Default] 8°F (4°C)	Only valid for product which has three stage auxiliary heating.
17	SW4-4	1,3	Default ON	[Default] For single stage supplemental heat, W1 and W2 are connected.	For dual stage supplemental heat, W1 and W2 are controlled independently.	

**Table 13 – (Continued) Indoor Unit Dial Code**

No.	Dial Code	Control Scenario	Function	ON	OFF	Note
18	SW4-2	1,3	DH function selection	[Default] Dehumidification control not available.	Dehumidification feature is enabled through thermostat.	
19	SW5-3	1,2,3	L or alarm relay selection	L output 24 V or alarm relay close only when refrigerant sensor fault or R-454B refrigerant leakage is detected.	[Default] L output 24V or alarm relay close when any fault is detected.	
20	SW5-4	1,2,3	R output selection	R stop output 24V when refrigerant sensor fault or R-454B refrigerant leakage is detected.	[Default] R keep output 24V even when refrigerant sensor fault or R-454B refrigerant leakage is detected.	

Control Scenario	24V Tstat, S1 + S2	1
	Wired controller S1 + S2	2
	Full 24V	3

**NOTE:** Control scenario 3 is not applicable for this unit.

#### **Address DIP Switch:**

Address dialing S1+SW8: When the user uses the centralized controller, the address dialing is required.

Network address: The address silkscreen is NET address, which is composed of a 16-bit address rotary code S1 plus a two-digit DIP switch SW8 [Set during engineering installation, no network function does not need to be set].

- When SW8 is 00 (the dialing code is not connected), the network address value is the value of S1;
- When SW8 is 10 (corresponding to the switch of the hardware connected to the 10K resistor), the network address value is S1 plus 16;
- Determined by dial code SW8 1-10K 2-5.1K
- When SW8 is 01 (corresponding to the dial code of the 5.1K resistor connected to the hardware is turned on), the network address value is the value of S1 plus 32;
- When SW8 is 11 (all dialing codes are on), the network address value is the value of S1 plus 48.

**Table 14 – Table A**

# SOUND PRESSURE TESTING METHOD

**Fig. 17 —Horizontal Installation**

**Fig. 18 —Vertical Installation**

## NOTES:

- Sound measured at 4.92ft/1.5m (horizontal installation) / 3.28ft(1m) (vertical installation) away from the center of the unit.
  - Data is valid at free field condition
  - Data is valid at nominal operation condition
  - Reference acoustic pressure 0db = 20 micropascals
  - Sound level will vary depending on a range of factors such as the construction (acoustic absorption coefficient) of a particular room in which the equipment is installed
  - The operating conditions are assumed to be standard

## FAN PERFORMANCE

**Fig. 29 – 18k (Vertical, Horizontal Right, Horizontal Left)**

Setting of air volume through engineering mode:

- To enter engineering mode, in power-on or standby mode, and in non-locked state, press the key combination “ON/OFF + Air Speed” for 7s.
- Set the air volume of cooling mode at Channel 23, and set the air volume of heating mode at Channel 25. Refer to following air volume table:

**Table 19 — 18K - Cooling**

Cooling	Default	-1	-2	-3	-4	-5	-6	-7
Turbo	618	598	578	558	538	518	498	478

## FAN PERFORMANCE (CONT.)

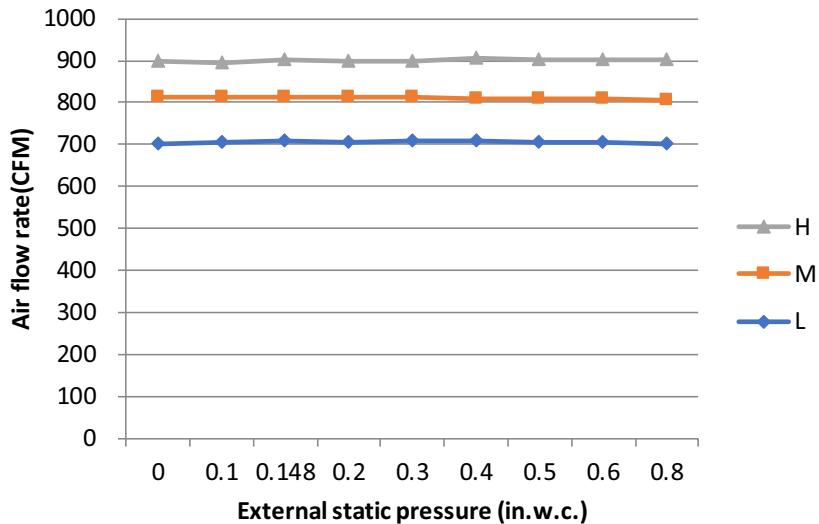

Fig. 31 – 30k (Vertical, Horizontal Right, Horizontal Left)

Setting of air volume through engineering mode:

- To enter engineering mode, in power-on or standby mode, and in non-locked state, press the key combination “ON/OFF+ Air Speed” for 7s.
- Set the air volume of cooling mode at Channel 23, and set the air volume of heating mode at Channel 25. Refer to following air volume table:

Table 23 — 30K - Cooling

Cooling	Default	-1	-2	-3	-4	-5	-6	-7	-8	-9	-10	-11

## FAN PERFORMANCE (CONT.)

**Fig. 34 —60k (Vertical, Horizontal Right, Horizontal Left)**

Setting of air volume through engineering mode:

- To enter engineering mode, in power-on or standby mode, and in non-locked state, press the key combination “ON/OFF+ Air Speed” for 7s.
- Set the air volume of cooling mode at Channel 23, and set the air volume of heating mode at Channel 25. Refer to following air volume table:

# GUIDE SPECIFICATIONS

## VERTICAL AIR HANDLER

Size Range: 1.5 to 5 Ton Nominal Cooling and Heating Capacity Model  
Number: D5FSAA

## Part 1 - GENERAL

### **1.01 System Description**

Indoor, air handler, direct-expansion fan coils are matched with a heat pump outdoor unit.

### **1.02 Agency Listings**

Unit is rated per AHRI Standards 210/240 and listed in the AHRI directory as a matched system.

### **1.03 Delivery, Storage, And Handling**

Units are stored and handled per the unit manufacturer's recommendations.

### **1.04 Warranty (For Inclusion By Specifying Engineer)**

## Part 2 - PRODUCTS

### **2.01 Equipment**

#### **A. General:**

Indoor, direct-expansion fan coil. The unit is complete with cooling/heating coil, fan, fan motor, piping connectors, electrical controls, microprocessor control system, and integral temperature sensing.

#### **B. Unit Cabinet:**

Unit cabinet is constructed of galvanized steel. The cabinet is fully insulated for improved thermal and acoustic performance.

#### **C. Fans:**

The fan is the tangential direct-drive blower type with air intake at the rear or bottom of the unit and discharge at the front.

#### **D. Coil:**

The coil is a copper tube with aluminum fins and galvanized steel tube sheets. The fins are bonded to the tubes by mechanical expansion and specially hydrophilic pre-coated for enhanced wet-ability. A drip pan under the coil has a drain connection for piping attachment to remove condensate.

#### **E. Motors:**

The motors have an open drip-proof, permanently lubricated ball bearing with inherent overload protection. Fan motors are 4-speed.

#### **F. Controls:**

The controls consist of a microprocessor-based control system which controls the space temperature, determines optimum fan speed, and runs self diagnostics.

#### **The unit has the following functions (at a minimum):**

1. An automatic restart, after a power failure, which sets the unit back to the same operating conditions it operated under at time of failure.
2. A timer function to provide a minimum 24-hour timer cycle for system Auto Start/Stop.
3. Automatic airflow technology - fan maintains set CFM range at up to 0.80" W.C. ESP
4. Temperature-sensing controls sense return air temperature.
5. Indoor coil freeze protection.
6. Wired remote controller to enter set points and operating conditions.
7. **DEHUMIDIFICATION** mode provides increased latent removal capability by modulating system operation and set point temperature. Applicable **only** with third party thermostats that have the dehumidification option.
8. **FAN-ONLY** operation to provide room air circulation when cooling is not required.
9. Diagnostics provide continuous checks of unit operation and warns of possible malfunctions. Error messages appear on the unit.
10. The fan speed control is user-selectable: high, medium, low, or microprocessor controlled automatic operation during all operating modes.
11. Automatic heating-to-cooling changeover in the **HEAT** pump mode. The control includes deadband to prevent rapid mode cycling between heating and cooling.
12. Indoor coil high temperature protection is provided to detect an excessive indoor discharge temperature when the unit is in the **HEAT** pump mode.

#### **G. Electrical Requirements:**

The indoor fan motor operates on 208-230V. Power is supplied for residential units.

#### **H. Operating Characteristics:**

The air handler system has a minimum SEER2 (Seasonal Energy Efficiency Ratio) and HSPF at AHRI conditions, as listed on the specifications table.

#### **I. Refrigerant Lines:**

All units have refrigerant lines that can be oriented to connect from the side of the unit. Both refrigerant lines must be insulated.

#### **J. Leak Mitigation**

The unit is equipped with a refrigerant leak detection sensor.
