HPGFH/HPGFHX Dimensional Data

HPGF/HPGFH Pump Features

A. Two Barrier Seal

One epoxy barrier and one compression fitting for maximum protection against wicking and water seepage into the motor housing.

B. Bearings

The heavy-duty ball bearings, upper (radial) and lower (thrust), are continuously lubricated by oil to ensure long service life.

C. Motor

Electrical design combines the advantages of high torque output with optimum running efficiency engineered specifically for grinder operation.

D. Stator Bolts

The stator is secured to the motor housing by means of stator bolts which ensure ease of maintenance if the need ever arises.

E. Shaft

Standard stainless steel shaft in grinder pump.

F. Dual Seals

Dual seals for maximum moisture protection.

G. Moisture Probe

Moisture detection probe.

H. Cutters

Exclusive "Dual Cutter" design cuts solids to smallest particle size thereby greatly reducing clogging, roping, or binding.

I. Impeller

Impeller made of high strength 316 SST / CF8M which provides a high level of corrosion resistance and toughness from impact for a wide variety of slurry pumpage.

Applications:

Residential, Commercial, Resort Area
